RDTEN 1 (BA 1-3)	The estimated cost of this report for the Department of the Navy (DON) is $23,696. The estimated total cost for supporting the DON budget justification material is approximately $3,188,286 during the 2026 fiscal year. This includes $207,573 in supplies and $2,980,713 in labor.	$23,696
RDTEN 2 (BA 4)	The estimated cost of this report for the Department of the Navy (DON) is $101,648. The estimated total cost for supporting the DON budget justification material is approximately $3,188,286 during the 2026 fiscal year. This includes $207,573 in supplies and $2,980,713 in labor.	$101,648
RDTEN 3 (BA 5)	The estimated cost of this report for the Department of the Navy (DON) is $195,187. The estimated total cost for supporting the DON budget justification material is approximately $3,188,286 during the 2026 fiscal year. This includes $207,573 in supplies and $2,980,713 in labor.	$195,187
RDTEN 4 (BA 6)	The estimated cost of this report for the Department of the Navy (DON) is $23,361. The estimated total cost for supporting the DON budget justification material is approximately $3,188,286 during the 2026 fiscal year. This includes $207,573 in supplies and $2,980,713 in labor.	$23,361
RDTEN 5 (BA 7-8)	The estimated cost of this report for the Department of the Navy (DON) is $103,900. The estimated total cost for supporting the DON budget justification material is approximately $3,188,286 during the 2026 fiscal year. This includes $207,573 in supplies and $2,980,713 in labor.	$103,900

THIS PAGE INTENTIONALLY LEFT BLANK

Research, Development, Test and Evaluation, Navy

For expenses necessary for basic and applied scientific research, development, test and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, $32,386,619 to remain available for obligation until September 30, 2028.

MANDATORY FUNDING JUSTIFICATION:

The FY 2027 request for Research, Development, Test and Evaluation, Navy includes $32,386,619 thousand of discretionary and $3,849,854 thousand of mandatory for a total of $36,236,473 thousand.

The mandatory funds support:

Advanced Shipbuilding Industrial Base and Future Ship Experimental: The $1,850 million in Navy RDT&E will be used to investigate a full spectrum of procurement options to attract more shipbuilding capacity into domestic shipyards and bring additional ships into the fleet – including studies of the ability of allied shipbuilding companies to build ships or components. This funding will be split into two separate study and procurement efforts targeting the fleet's future CruDes and Frigate inventories, respectively.

C2D2 F-35C: The FY 2027 request for C2D2 F-35C includes $689 million supporting Block 4 capability development and acceleration of Engine & Power Thermal Management delivery timelines.

C2D2 F-35B: The DON's FY 2027 request for C2D2 F-35B includes $788 million supporting Block 4 capability development and acceleration of Engine & Power Thermal Management delivery timelines.

FA-XX: The Navy's FY 2027 request for FA-XX includes $72 million with details held at a higher classification level.

Conventional Prompt Strike (CPS): The Navy's FY 2027 budget request includes $451 million mandatory request for the marinization of the Box Erector Launcher System (BELS) and acceleration of TI-development.

The FY 2026 spend plan for Research, Development, Test and Evaluation, Navy includes $27,942,776 thousand of discretionary and $6,747,792 thousand of mandatory for a total of $34,690,568 thousand.

The FY 2025 spend plan for Research, Development, Test and Evaluation, Navy includes $26,098,258 thousand of discretionary and $7,030 thousand of mandatory for a total of $26,105,288 thousand.

A. Mission Description and Budget Item Justification

This is a continuing program that consolidates the design, fabrication and integration of Naval Electronic Warfare (EW) threat simulators for increased managerial emphasis and coordination. These simulator development efforts provide realistic Developmental and Operational Test and Evaluation environments to test EW systems and defensive tactics. These projects develop threat Anti-Air and Anti-Ship weapon system simulators in accordance with the Services' requirements.

The 0602 Project, Electronic Warfare Environment Simulation, directly supports the Test and Evaluation resource requirements for all Naval Air EW development programs to include radio frequency situational awareness and countermeasures. Programs in development and future programs include: Joint Strike Fighter, EA-18G, Low Band Transmitter, Next Generation Jammer, Advanced Anti-Radiation Guided Missile (AARGM), Long Range Anti-Ship Missile (LRASM).

The 0672 Project, Effectiveness of Naval Electronic Warfare Systems (ENEWS), directly supports the Test and Evaluation resource requirements for Surface Ship Electronic Warfare Systems. ENEWS provides anti-ship cruise missile seeker simulators, modeling and simulation and state of the art test facilities. Current and future Programs of Record include: Surface Electronic Warfare Improvement Program (SEWIP), Advanced Off-Board Electronic Warfare (AOEW), Nulka, Long Endurance Electronic Decoy (LEED) and advanced IR Decoys.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

The objective of this project is development of necessary simulation facilities and approaches to allow determination of the effectiveness of Electronic Warfare (EW) in real world engagement situations and to support the introduction of modern, effective EW systems into Naval Aviation platforms. The heavy use of test resources by all Services demonstrates the importance of these assets.

The Electronic Warfare Environment Simulation project is unique because it is the only program within the Department of War which develops and provides Naval anti-air warfare threat assets for Test and Evaluation (T&E).

This project directly supports the T&E resource requirements for all Naval Air EW development programs, to include radio frequency situational awareness and countermeasures. Programs in development and future programs include: Joint Strike Fighter, EA-18G, Low Band Transmitter, Next Generation Jammer, Advanced Anti-Radiation Guided Missile (AARGM), Long Range Anti-Ship Missile (LRASM).

This project provides for the development of an Integrated Air Defense T&E capability to be fielded at each of the three sites comprising the Navy's Tri-Center complex: Naval Air Warfare Center Weapons Division, China Lake and Point Mugu in CA, and Naval Air Warfare Center Aircraft Division, Patuxent River, MD.

A. Mission Description and Budget Item Justification

The objective of the Effectiveness of Naval Electronic Warfare (EW) Systems (ENEWS) Project is the development, maintenance, upgrade and application of critical simulation assets to determine the effectiveness of Electronic Warfare (EW) systems for the Surface Navy in simulated real-world engagement scenarios. ENEWS provides the Navy with Anti-Ship Missile (ASM) simulators, Modeling and Simulation (M&S) and state-of-the-art evaluation facilities to support the introduction of modern, effective shipboard and off-board EW systems and tactics for EW Programs of Record (POR). ENEWS develops, maintains and operates hardware simulators, digital simulations (M&S) of legacy, modern and advanced threat ASMs that provide EW PORs an integrated simulation capability through at-sea captive carry field trials with flyable simulators, digital ASM models and the Central Target Simulator (CTS) hardware-in-the-loop evaluation facility. The reliance of ENEWS assets by the Naval Sea Systems Command, Operational Test and Evaluation Force (OPTEVFOR), Office of Naval Research (ONR) and other EW Research, Development, Test and Evaluation (T&E) agencies speaks to the overall importance of this project. The project provides support and effectiveness evaluations for EW system designs, Engineering Test (ET), Development Test (DT), Operational Test (OT) events including and the development and utilization of techniques and tactics. In the past, ENEWS quick reaction capabilities have provided significant support and solutions in crisis situations such as the Libyan crises, Iran threat, Persian Gulf crisis, Operation Desert Shield/Storm, the Ukrainian Crisis in the Black Sea, and the crisis in the Red Sea. Simulation Display (SIMDIS) is a modeling tool developed under the ENEWS Project to support visualization of test events. SIMDIS has been adopted by most Department of War (DoW) T&E ranges as an effective tool that provides two and three dimensional graphical and video displays of live and post-test event data for EW T&E. One of the primary threats to surface ships is ASM systems. The ENEWS Project is unique in that it is the only project within DoW dedicated to developing and providing realistic ASM assets to test and evaluate the effectiveness of shipboard EW systems and tactics against these types of threats. The ENEWS Project is a critical part of the Office of the Secretary of Defense Test Resource Master Plan. This plan employs many ENEWS assets for planning, analysis, testing, and verification of shipboard and off-board EW techniques and tactics. As part of its normal activities, ENEWS provides Development Test and Evaluation (DT&E), Operational Test and Evaluation (OT&E), and Follow-on Operational Test and Evaluation (FOT&E) support to the surface Navy for all ship classes. ENEWS provides support to multiple surface Navy programs including: Surface Electronic Warfare Improvement Program (SEWIP), Nulka, Long Endurance Electronic Decoy (LEED), Scaled Onboard Electronic Attack (SOEA), advanced Infrared (IR) decoys, decoy placement, ship Infrared signature and radar cross section measurements for surface combatants and other ship self-defense initiatives, including the Future Naval Capability process. In addition, ENEWS assets support effectiveness evaluations for North Atlantic Treaty Organization (NATO) ships' EW systems in joint allied exercises and joint EW exercises such as Rim of the Pacific (RIMPAC) and Northern Edge test events.

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
Description: Maintain and perform hardware and software upgrades to the Effectiveness of Naval Electronic Warfare (EW) Systems (ENEWS) inventory of flyable and shore based Anti-Ship Missile (ASM) Electro-Optic/Infrared (EO/IR), Visible and Radio Frequency (RF) simulators and simulation systems. Perform periodic evaluation of IR and RF simulators to assess simulation operational performance and collect data for comparison with previously recorded data. Also includes development and maintenance of all simulator control consoles, captive-carry pods and power supplies. ***FY 2026 Plans:*** - Continue to maintain custom instrumentation equipment such as digital data acquisition and ground truth systems. - Continue to maintain and upgrade 20 RF and EO/IR hardware simulators, 6 programmable simulators, and associated simulator control panels to support system effectiveness evaluations for EW Program of Record (PORs) such as SEWIP (V)6, (V)7, SOEA, and LEED. Maintenance and upgrades include integration of higher performance components for increased reliability and improved mission performance. Installation of specialized wiring and cables in test aircraft and maintaining flight certifications for captive-carry electronic pods. - Complete packaging two legacy hardware simulators and place into storage. - Initiate introduction of one new simulation asset into the ENEWS inventory, prepare and certify system for field testing. - Initiate and complete hardware and software upgrades for six RF simulators and one EO/IR simulator. ***FY 2027 Base Plans:*** - Continue to maintain custom instrumentation equipment such as digital data acquisition and ground truth systems. - Continue to maintain and upgrade 21 RF and EO/IR hardware simulators, 6 programmable simulators, and associated simulator control panels to support system effectiveness evaluations for EW Program of Record (PORs) such as SEWIP (V)6, (V)7, SOEA, and LEED. Maintenance and upgrades include integration of higher performance components for increased reliability and improved mission performance. Installation of specialized wiring and cables in test aircraft and maintaining flight certifications for captive-carry electronic pods. - Complete introduction and flight certification for new simulation asset into the ENEWS inventory. - Initiate diagnostic testing to verify readiness and operability of simulator inventory. - Initiate introduction of new RF simulation asset into the ENEWS inventory. Prepare and certify system for field and flight testing.

A. Mission Description and Budget Item Justification

This program element funds the development of Aerial Target Systems, Sea Surface Targets and Undersea Warfare Targets, Target Control systems, and associated Target Mission Support Systems, Target Threat Simulation Program and Target Augmentation and Auxiliary Systems required to simulate real world threats. These capabilities are required to execute developmental/operational test and evaluation of naval combat weapon systems and to satisfy advanced fleet training requirements while ensuring the Navy continues to develop threat simulations of emerging threat capabilities.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST AND EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

The Aerial Target Systems Development program designs and develops threat representative subsonic and supersonic targets and associated payloads to emulate threat weapon systems and aircraft. In addition to representative air vehicles, this includes development of Target Control (TC) systems and associated Target Augmentation and Auxiliary Systems (TA/AS) which are used to replicate specific threats. Targets and auxiliary payloads are developed to support test and evaluation of combat systems required to defend fleet surface and air units in a hostile environment. As to specific hardware development, this project includes:

- Supersonic Targets: Portfolio includes GQM-163A Supersonic Sea-Skimming Target (SSST) and AQM-88 Supersonic Air Launch Target (SALT) programs. Supersonic targets represent supersonic anti-ship cruise missile threats. The design and development of GQM-163A capabilities provide threat representative targets that are used in direct support of Developmental Test and Evaluation, Operational Test and Evaluation, and Live Fire Test and Evaluation of major combat weapons programs and support fleet training. Critical live-fire Test and Evaluation events are supported for AEGIS CG and DDG Mods, DDG-51 Flight III, LHA 8, CVN-79 LPD Flight II, SM-6, SM-2, RAM, and ESSM. The GQM-163A is a non-recoverable supersonic sea skimming aerial target, capable of speeds in excess of Mach 2.5 and cruise altitudes from 13.0 to 52K feet. The GQM-163A has also demonstrated higher altitude diving threat profiles. Funding may also be used to begin development of potential future supersonic targets to keep pace with emerging threats. Funding is provided for kinematic performance enhancements to develop increases in current capabilities. Funding may also be used to begin development of potential future supersonic targets to keep pace with emerging threats.

- Subsonic Targets: Portfolio includes BQM-177A, BQM-34S and BQM-167 subsonic target programs. The BQM-177A SSAT primarily represents subsonic anti-ship cruise missile threats. The BQM-177A SSAT provides threat representation for developmental and operational test & evaluation events of major combat weapons systems programs and in support of fleet training events. Specifically, the BQM-177A SSAT provides critical live-fire test and evaluation events for AEGIS CG and DDG Mods, DDG-51 Flight III, CVN-79, LHA-8, LPD Flight II, JSF, E-2D, SM-6, SM-2, RAM, and ESSM. BQM-34S are undergoing product improvement program efforts to address component obsolescence and improve current performance to meet evolving requirements. The BQM-34S is also developing upgrades to the Mk-129 Jet-Assisted Take-Off (JATO) rocket motor to support new production in FY2029. The BQM-167A is utilized by operational aviation squadrons that participate in Navy Weapon System Evaluation Program (NWSEP) at Tyndall Air Force Base, FL. NWSEP is the traditional mechanism for aviation squadrons to accomplish Training and Readiness (T&R) requirements provided by Non-Combat Expenditure Allocation (NCEA) of air-to-air weapons as part of Fleet Readiness Plans (FRP) prior to deployment.

- Target Augmentation and Auxiliary Systems (TA/AS): Includes Target Threat Simulation Program (TTSP), Target Mission Support Systems (TMSS), and Target Control (TC). The TTSP portfolio provides the payload equipment required to electronically enhance aerial targets to provide threat representative radio frequency signatures, specifically the electronic attack and threat radar emissions (active emitters). Development of threat representative simulation components is on-going and required to keep pace with evolving threats and ensure that the Navy's threat simulation capabilities remain relevant against emerging threats. TC provides command and control of targets to enable the safe execution of threat-representative mission profiles. TA/AS also includes the design, development and qualification of various

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026
Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0604258N / *Target Systems Development*	**Project (Number/Name)** 0609 / *Aerial Target System Dev*

TMSS projects including: Target RF datalink hardware, ground control hardware and software, scorer transponders, scoring ground stations, telemetry antennas, radar and locator beacons, identification, friend or foe transponders, and associated test sets. TA/AS enables each target to be uniquely configured for specific mission profiles and provide for high fidelity simulation of foreign threats. TA/AS-configured targets are used for radar acquisition test, electronic countermeasures (jamming) evaluation, infrared measurement and testing, radar cross section evaluation, decoy-effectiveness testing, maneuver analysis, electronic warfare evaluation, warhead-effectiveness testing and evaluation of fleet tactics. Scoring capabilities include both surface and airborne scalar scoring systems.

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
Title: Supersonic Targets - Development & Upgrades of Supersonic targets	0.260	2.415	7.670	0.000	7.670
Articles:	-	-	-	-	-
Description: Provides funding for the development of GQM-163A upgrades/evolutionary development to keep pace with evolving threat characteristics. Efforts include continued development of performance envelope characteristics to include flight termination performance, enhanced speed and distance capabilities, and multiple target launch capability. Funding will also support the development of other unique supersonic targets as required.					
FY 2026 Plans: Continue the development of GQM-163A Supersonic Sea Skimming Targets (SSST) improvements and increased capability efforts including Electronic Warfare (EW) payloads and enhanced flight performance. Start development of performance enhancements to current capabilities. Continue to support the development and test of other unique supersonic targets as required.					
FY 2027 Base Plans: Continue the development of GQM-163A Supersonic Sea Skimming Targets (SSST) improvements and increased capability efforts. Continue development of new capabilities to enhance target utility in fleet operational and test environments. This includes kinematic performance enhancements to current capabilities designed to simulate advanced advance ship-cruise missiles (ASCM), including: increased operational altitude capabilities, enhanced dive angle performance parameters, improved high-G maneuvering characteristics representative of ASCM threat profiles. Develop the plans for multiple modifications including the outer mold line modifications to enhance aerodynamic performance and threat simulation fidelity, software development and integration to support enhanced flight profiles and maneuvering capabilities, and flight testing.					
FY 2027 OOC Plans: N/A					
FY 2026 to FY 2027 Increase/Decrease Statement:

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
Threat Simulation Program (TTSP) provides the payload equipment required to electronically enhance aerial/ surface targets to provide threat representative Radio Frequency signatures, specifically the Electronic Attack and Threat Radar Emissions (Active Emitters). The TTSP accomplishes this by providing a collection of modules which are integrated into individual targets in various configurations to provide the ability to emulate threat RF seekers, radars and decoys. Funding will support the continued development of the TTSP portfolio so that the Navy can keep pace with emerging enemy threats. Provides funding for the development of Target Control (TC) systems and Target Augmentation and Auxiliary Systems (TA/AS) capable of supporting Test and Evaluation (T&E) and fleet training activities to ensure emerging threat simulation requirements are met. Target Control Systems (TCS) funding improves command and control systems capable of controlling multiple targets simultaneously while delivering adequate fidelity of T&E telemetry data. The TMSS program portfolio provides target control, scoring, location, and navigation of air and land targets for fleet training and weapons systems test and evaluation. Funding also supports the design, development and qualification of TMSS to the current and next generation TC systems, scalar scorers, scoring ground station, telemetry antennas, radar and locator beacons, identification friend or foe and associated test sets. Augmentation and auxiliary systems must be capable of augmenting targets in support of radar acquisition test, electronic countermeasures (jamming) evaluation, infrared measurement/test, radar cross section evaluation, decoy effectiveness, maneuver analysis, electronic warfare, warhead effectiveness and evaluation of fleet tactics, readiness, and training. ***FY 2026 Plans:*** Continue technique development and integration of Next Generation DRFM System onto Subscale targets. Funding in support of development of the Next Generation ULQ-21 system for use in Subscale Targets and Full-Scale Pod Systems. Complete development of Dual-Band Decoy systems into existing ALE-55 Subscale and Full-Scale systems. Initiate development of Saab BOL Countermeasure System onto BQM-177A and BQM-34S. R&D and evaluation of advanced payloads. Support development of systems to address obsolescence of legacy components and systems. Continue development of High frequency DRFM to meet future fleet needs. Continue development and qualification of the Next Generation SNTC Ground Control Station with associated hardware and software upgrades. Continue development of the Next Generation Scoring System. Continue development of the C Band Radar Tracking Transponder RT-2109 replacement. ***FY 2027 Base Plans:*** Continue technique development and integration of Next Generation DRFM System onto Subscale targets. Remarks

D. Acquisition Strategy

Supersonics: The GQM-163A Supersonic Sea-Skimming Target (SSST) is an ACAT II program. The acquisition strategy includes design efforts for integration of new Radome and Radar Altimeter, Electronic Warfare (EW) systems and other Engineering Change Proposals as required to emulate emerging threat systems. These development efforts will continue to be incorporated into the production baseline. Production efforts are expected to continue at higher quantities in order to meet projected MDAP T&E requirements. The acquisition strategy includes the Supersonic Air Launch Target (SALT) modification, an Abbreviated Acquisition Program (AAP). Additionally, development of alternative supersonic targets is being explored.

Subsonics: The Subsonic Aerial Target (SSAT) program is an ACAT-IV program. The Low Rate Initial Production (LRIP) 3 contract was awarded in 3rd Quarter of FY 2019 with Full Rate Production (FRP) Contracts initiated in FY 2020. Full Operational Capability (FOC) was declared in 2022. Engineering Change Proposals will be contracted as required via IDIQ contract vehicles to keep pace with emerging threat systems and incorporate the changes into the production baseline. Development efforts for other subsonic targets will be resourced via other contracting efforts as required.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026
Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0604258N / *Target Systems Development*	**Project (Number/Name)** 0609 / *Aerial Target System Dev*

Target Augmentation and Auxiliary Systems (TA/AS): Includes Target Threat Simulation Program (TTSP) and Target Mission Support Systems (TMSS). The acquisition strategy for these components vary depending on industry responses to government issued Requests for Proposals, but most are acquired via Firm Fixed Price IDIQ contracts.

A. Mission Description and Budget Item Justification

Budget provides funding for multiple lines of improvement across the Navy's portfolio of reusable and expendable undersea warfare targets.

1. Provides funding for a Long Endurance Variant of MK 39 Mod 4 Expendable Mobile ASW Training Target (EMATT) to support 24+ hour missions. This effort supports development of Long Endurance module for the MK 39 Mod 4 EMATT. The Long Endurance module will allow the EMATT to support training of multiple aircrews in a single, coordinated extended tracking exercise and facilitate the training of multiple watch sections on surface ships and submarines in an extended tracking exercise.

2. Provides funding for an Extremely Low Frequency Variant of MK 39 MOD 4 Expendable Mobile ASW Training Target (EMATT) to support narrowband tracking requirements for USN submarines. This effort supports the development of a Low Frequency module for the MK 39 MOD 4 EMATT. The Low Frequency Variant upgrade allows EMATT to better emulate low frequency signatures of modern threat submarines.

3. Provides funding to initiate development efforts starting in FY 2027 to add Magnetic Anomaly Detection (MAD) wire to allow stimulation of MH-60R capability to MK39 MOD 4 EMATT.

A. Mission Description and Budget Item Justification

Budget is a FY26 RDT&E,N Congressional Add under PE 0604258N ASW Target Systems Development to advance critical capability developments in the ASW Target Program of Record:

1. Additional funding will capitalize on existing Navy investments to improve Program of Record ASW Training Target capabilities while accelerating integration of multiple capability improvements for Low Frequency Active, Sprint Speed, and Long Endurance Variants of the MK 39 EMATT.
2. Additional funding will accelerate Navy investments to improve Program of Record ASW Training Target capabilities for the MK 66 increment 2 performance enhancements.

A. Mission Description and Budget Item Justification

This project corrects major deficiencies, improves Test & Evaluation (T&E) capabilities, and increases T&E support effectiveness at Navy Major Range and Test Facility Base (MRTFB) ranges and facilities. The T&E Investment project improves, modernizes and adds new test capabilities at the following test facilities: the Naval Undersea Warfare Center Division Newport Atlantic Undersea Test and Evaluation Center, Andros Island, Bahamas; the Nanoose and Dabob ranges of the Naval Undersea Warfare Center Division Keyport, Keyport, WA; the Sea Range, Land Ranges, Target Operations, Ordnance T&E Facility, Test Wing Pacific located at the Naval Air Warfare Center Weapons Division, Point Mugu, CA and China Lake, CA; and the Atlantic Test Range, Air Combat Environment T&E Facility, Electromagnetic Environmental Effects, Air Vehicle Modification and Instrumentation facility, Test Wing Atlantic, Target Operations, and the Propulsion Systems Evaluation Facility located at the Naval Air Warfare Center Aircraft Division, Patuxent River, MD and the test and evaluation capabilities located at the Pacific Missile Range Facility, Kauai, HI.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

This program provides analytical support to the Secretary of the Navy and the Chief of Naval Operations as a basis for major policy, planning and acquisition program execution decisions. It supports research and development strategy development and planning. It supports studies in the areas of manpower, personnel, training, and aviation. It also develops analytical tools for evaluating effectiveness of U.S. weapons against potential foreign threat ships and submarines.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

The Chief of Naval Personnel (CNP) has a continuing need for studies and analysis of Manpower and Personnel (M&P) policies and programs and critical M&P issues that have Navy-wide implications. This project provides an essential management tool to: (a) assess the effectiveness of existing M&P policies and programs; (b) identify needs for new policies and programs; (c) determine the required manpower and training mix relative to changing demographic, societal and legislative/regulatory actions, and to evolving strategic and geopolitical factors; (d) study the impact of M&P programs on Navy accession, attrition, retention, and performance; and, (e) to develop, validate and/or refine a broad range of M&P forecasting models. The program permits Navy to more effectively utilize Research and Development expertise to respond to emergent M&P issues on a continuing basis. This program is funded under RDT&E operational systems development because it encompasses engineering and development of new end-items prior to production approval decision.

Military Service Academies (MSA) Uniform Nomination Portal program is promulgated by Section 575 of the NDAA (FY) 2021 (Public Law 116-283) that requires the Department to establish a uniform nomination portal for all three MSAs that enable Members of Congress to nominate individuals for appointment to each MSA through a single secure website and have the ability to collect and report demographic information by nominating source. The Secretary of the Navy (United States Naval Academy) is the lead Service of the MSA Uniform Nomination Portal project. In coordination with the Department of the Army and the Department of the Air Force, the Secretary of the Navy will lead the effort to develop and implement the Uniform Nomination Portal and demographic database.

Description: The Chief of Naval Personnel (CNP) has a continuing need for studies and analysis of Manpower and Personnel (M&P) policies and programs and critical M&P issues that have Navy-wide implications. This project provides an essential management tool to: (a) assess the effectiveness of existing M&P policies and programs; (b) identify needs for new policies and programs; (c) determine the required manpower and training mix relative to changing demographic, societal and legislative/regulatory actions, and to evolving strategic and geopolitical factors; (d) study the impact of M&P programs on Navy accession, attrition, retention, and performance; and, (e) to develop, validate and/or refine a broad range of M&P forecasting models. The program permits Navy to more effectively utilize Research and Development expertise to respond to emergent M&P

A. Mission Description and Budget Item Justification

Funding supports Naval aviation pre-Milestone B developmental activities to include the conduct and integration of systems engineering activities. This project unit provides information, automated tools, and decision aids necessary to perform acquisition planning in support of warfighter capability requirements. This project unit also supports research, development, and analysis efforts to include various studies, joint requirements analysis, and cost analysis in support of systems engineering activities, analyses of alternatives, and development of Capability Evolution Plan. Due to high turnover and end of service life of several Naval aircraft set against increasing threat capabilities, DOW 5000 series mandates documentation of capability requirements and mechanisms to obtain these capabilities. This project unit allows Naval aviation the means to properly identify capability gaps and potential solutions required to maintain maximum warfighting capability realizing (or achieving) reductions to technical risks and overall program costs.

A. Mission Description and Budget Item Justification

The Department of the Navy's (DON) Studies and Analysis Federally Funded Research and Development Center (DON S&A FFRDC - hereinafter referred to as the FFRDC) provides independent, objective, and expert analyses based on its unique access to sensitive data and hands-on exposure to fleet operations gained through a world-wide field program. The FFRDC's research program is centrally funded by this program element and is primarily concentrated along one Marine Corps category and thirteen Navy categories of study called product areas. These product areas are structured to enhance the FFRDC's focus of research and analysis upon the major present and future needs and issues of the Navy and the Marine Corps. Because of rapid advances in technology, changes in the fleet, the increasing complexity of weapon systems, and reductions in manpower, force structure, budgets, the current security environment, and Department of War (DOW) transformation, the Navy and Marine Corps have a greater need for analyses that are sophisticated, relevant, and timely. The FFRDC conducts research and analysis at all security classification levels, to include Sensitive Compartmented Information (SCI) and Special Access Programs (SAP).

Due to the number of efforts in this PE, the programs described herein are representative of the work included in this PE.

A. Mission Description and Budget Item Justification

This project supports the Marine Corps portion of the Department of the Navy's (DoN) Studies and Analysis Federally Funded Research and Development Center (DoN S&A FFRDC - hereinafter referred to as the FFRDC) Research Program, and is managed as an element of the Marine Corps Studies System. This program provides the Marine Corps with independent and objective research and analysis of specific issues/topics appropriately performed by a FFRDC. Marine Corps Division analysts work at the FFRDC's headquarters and, through the FFRDC's Field representative Program serve at commands worldwide, including: Marine Forces Command, Marine Forces Pacific, Marine Special Operations Command, the three Marine Expeditionary Forces, and Marine Aviation Weapons and Tactics Squadron One (MAWTS-1). The FFRDC also assigns analysts to support the Deputy Commandants and their staffs as well as other Marine Corps organizations such as the Marine Corps Warfighting Lab, Marine Corps Systems Command, and the Commander, Marine Forces Reserve.

The program areas are linked to the Marine Corps Advocacy (prepotency), which are: (1) Logistics and Infrastructure; (2) Manpower and Training; (3) Research, Development and Acquisition; (4) Operations and Plans; (5) Programs and Resources; (6) Aviation; (7) Combat Development and Integration; and (8) Intelligence, Surveillance and Reconnaissance. FFRDC Scientific Analyst support provides six scientific analysts for the following six focus areas: Deputy Commandant (DC), Plans, Policies and Operations; DC Aviation; DC Installation and Logistics; DC Programs and Resources; DC Manpower Reserve Affairs; and Director, Manpower Plans (MP) - Manpower and Reserve Affairs (M&RA). The program continues analytical support for field exercises; Ad Hoc and Quick Response study requirements.

A. Mission Description and Budget Item Justification

This program supports the Navy's portion of the Department of the Navy's (DON) Studies and Analysis Federally Funded Research and Development Center (DON S&A FFRDC - hereinafter referred to as the FFRDC) Research Program, which is primarily concentrated along thirteen Navy categories of study called product areas. These product areas include the following: (1) Manpower/Personnel, Medical and Training; (2) Intelligence, Information and Networks; (3) Plans, Policy, and Operations; (4) Infrastructure and Readiness; (5) Resources, Programs, and Assessments; (6) Capability Integration; (7) Research, Development and Acquisition; (8) Navy Field Program; (9) Navy Field Exercise Program; (10) Scientific Analyst Program; (11) Navy Quick Response Projects; (12) Navy General Concept Development and (13) Naval Analyses Initiated Projects. This program provides the Navy with independent and objective research and analysis of specific issues/topics in support of key operational problems; efforts include field support to fleet commanders, scientific analyst support to Deputy Chiefs of Naval Operations (DCNOs) and their staffs, exercise support, and studies and analysis across the full spectrum of Naval Operations. Support has resulted in substantial improvements in force structure, fleet effectiveness, and significant cost avoidance.

Description: Funding in this project supports integrated research for the Department of Navy (DON) and other DOW components across a broad range of issues including the development and evaluation of tactics, operations testing of new systems, assessment of current capabilities, logistics and readiness, work-force management, space and space-related activities, cyber operations, cost and operational program analysis, assessment of advanced technology, force planning, and strategies implications of political-military developments. CNA provides analytic support and conducts individual analytic efforts for a wide range of DON components. It often also provides support to the Office of the Secretary of War, other military Services and Defense agencies.					
FY 2026 Plans: In FY26 CNA will support Navy analytic priorities by conducting studies, providing on-site analytic support to 27 Navy organizations. CNA will maintain its analytic competencies through a combination of line-funded and sponsor-funded work in the following areas:

A. Mission Description and Budget Item Justification

The Department of the Navy (DON) SBIR Program is a mission-oriented program that delivers innovative solutions to Naval requirements through a three-phase competitive awards process. Qualified small business concerns propose dual-use solutions, that primarily address naval needs, to Research and Development (R&D) topics aligned to Program Offices with resources to transition R&D-developed technology to warfighting capability. The SBIR Program requires each Federal agency that has an extramural budget for Research and Development in excess of $100,000,000 to set aside 3.2% for SBIR to engage domestic small businesses in Federal Research/Research and Development (R/R&D) and chart a path toward commercialization. The program's statutory goals are to stimulate technological innovation; increase small business participation in federally funded R&D; and increase private sector commercialization of federal R&D.

A. Mission Description and Budget Item Justification

The Small Business Technology Transfer (STTR) program requires Federal agency that has an extramural budget for Research and Development (R&D) in excess of $100,000,000 to set aside 0.45% for STTR. This funds cooperative R&D between small businesses and research institutions. The goal of the STTR program is to facilitate the transfer of technology developed by a research institution through the entrepreneurship of a small business concern.

Quantity of RDT&E Articles		-	-	-	-	-	-	-	-	-		

A. Mission Description and Budget Item Justification

The Small Business Technology Transfer (STTR) program requires Federal agency that has an extramural budget for Research and Development (R&D) in excess of $100,000,000 to set aside 0.45% for STTR. This funds cooperative R&D between small businesses and research institutions. The goal of the STTR program is to facilitate the transfer of technology developed by a research institution through the entrepreneurship of a small business concern.

A. Mission Description and Budget Item Justification

The Department of the Navy (DoN) Technology Transfer (T2) Program is a congressionally mandated program that requires federal laboratories to actively assess applications for Federal research and development projects, and to provide information and assistance to State or local government and to private industry (Stevenson-Wydler Act of 1980). The DoN Technology Transfer (T2) Program Management Office (DoN T2 PMO) is responsible for policy and guidance, as well as products and services that enable T2-designated commands and activities to facilitate the transfer of technology both into and out of the DoN to stimulate partnerships and advance naval technology needs. T2 Offices throughout the DoN enhance naval effectiveness by strategically leveraging industrial and technology into the NRE, and transfer appropriate Navy-developed innovative concepts, inventions, facilities, and materiel to the private sector for the purposes of dual-use commercialization, to benefit DoW, the public economy, and academia. This program provides the Department of the Navy interface to technology transfer and transition stakeholders such as the Small Business Innovation Research (SBIR) and Small Business Technology Transfer Programs (SBIR/STTR), Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)), National Institute of Standards and Technology (NIST)/Department of Commerce, Office of Science and Technology Policy (OSTP), and the Federal Laboratory Consortium (FLC) for matters relating to policy and reporting requirements for technology transfer.

The DoN T2 PMO, under the purview of the Chief of Naval Research at ONR, is also aligned within the NavalX organization to support its Tech Bridge activities.

Due to the number of efforts in this PE, the programs described herein are representative of the work included in this PE.

A. Mission Description and Budget Item Justification

The DoN T2 PMO oversees the use of T2 authorities to provide strategic research and development partnership support in collaboration with industry and academia as well as access and develop emerging technologies to solve challenges. The DoN T2 PMO develops policy and guidance, products and services to the Naval Research and Development Enterprise's (NR&DE) 51 T2-designated commands and activities. These commands and activities pursue collaborations and partnerships to enhance warfighter effectiveness by supporting research and development, test and evaluation, and maintenance and sustainment of improved capabilities for the fleet and force. These partnerships enable both private sector technology to enter into the NR&DE as well as appropriate Navy-developed innovative concepts, inventions, facilities and materiel to transfer to the private sector. In addition to these efforts, a strong ecosystem is created that the DoN and DoW can leverage to benefit the warfighter, academia, industry, and U.S. economy. (Public Law 96-480, Federal Technology Transfer Act of 1986). This program also provides the Department of the Navy interface to the Office of the Assistant Secretary of War for Research and Engineering as well as the Assistant Secretary of Commerce for Technology Policy for matters relating to policy and reporting requirements for technology transfer.

Description: DoN T2 PMO is responsible for T2 policy and guidance, program administration, oversight, and reporting for the Chief of Naval Research, as delegated by the Secretary of the Navy (SECNAV). The DoN T2 Program Office is also responsible for programmatic and financial management, setting requirements for and administering professional development training, opportunity marketing, T2-designations, pilot programs, and records management. This program also provides the Department of the Navy interface to technology transfer and transition stakeholders such as the SBIR/STTR Program, OUSDR&E, NIST/DoC, OSTP, and FLC for matters relating to policy and reporting requirements for technology transfer. The DoN T2 PMO, under the purview of the Chief of Naval Research at ONR, is also aligned within the NavalX organization to support its Tech Bridge activities.

A. Mission Description and Budget Item Justification

PU 0149 International Cooperative RDT&E:

Provide program management, execution, and support to implement a broad range of cooperative Naval Research and Development, Test and Evaluation initiatives to improve coalition interoperability, harmonize U.S. Navy requirements with allied and friendly nations, and identify cooperative international opportunities, and improve coalition interoperability. In addition, it develops coherent approaches, coordinating with partner nations, to sea-based missile defense, command, control, communications, computers and intelligence (C4I), and cooperative acquisition programs while also identifying technology to support the Global Maritime Partnership initiative.

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Navy	Date: April 2026
Appropriation/Budget Activity 1319: *Research, Development, Test & Evaluation, Navy I* BA 6: *RDT&E Management Support*	**R-1 Program Element (Number/Name)** PE 0605853N / *Management, Technical & Intl Supt*

PU 1767 Naval War College Strategic Studies Support:

Provides research, analysis and gaming activities which serve as a focal point, stimulus, and major source of strategic and operational thought within the Navy, joint and interagency communities. These efforts generate strategic and operational alternatives, quantitative analysis, war gaming and political military assessments, and provide recommendations regarding the formulation and execution of maritime options. The War Gaming Department plans, designs, executes, analyzes and reports on the Navy's Title 10 war games. These war games provide analytical input to the Navy's Strategic Plan, assessments of future concepts, and recommendations to the Navy's Quadrennial Defense Review, force design, and strategy process. The War Gaming Department also designs, executes and analyzes war games for theater security cooperation plans and operational war fighting issues.

PU 2098 Naval Postgraduate School (NPS) Studies Support:

Navy Postgraduate School (NPS) Naval Research Program (NRP) supports senior decision-makers from the Department of the Navy, the Office of the Chief of Naval Operations, Budget Submission Offices and Fleet Commanders in reaching well-informed, objective decisions on strategic, operational, and programmatic issues through collaborative and interdisciplinary research which integrates traditional research and analysis with advanced decision support tools. Faculty conducted research, student theses and capstone projects are an integral part of this program in support of the critical research and analysis requirements across the Naval enterprise.

PU 2221 Assessment Program:

The Navy Assessment Program provides capability-based planning assessment for Joint Capabilities Integration and Development System (JCIDS), conducts analysis to affect war fighting capability trades and enterprise resources, identifies needs, gaps, and overlaps, and assesses alternative solutions to Joint needs. The program supports both the development and use of modeling, simulation and analytically-based warfare and provides business analyses and analytic tools that provide the basis for decision making with respect to concepts of operations (CONOPS), Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) Systems (Information Dominance); warfare systems (Sea Strike, Sea Shield, and Sea Basing) and analytical underpinnings/basis for programmatic decisions of the Navy's top leadership regarding their architectures, force structure, and the Navy's core "organize, train, and equip mission" (the warfare and provider Enterprises). The program provides overarching Planning, Programming, Budgeting and Execution System (PPBES) analyses and guidance for PPBES which provides gap analysis and investment strategy and total obligation authority allocation. It provides independent capability analysis and assists in structuring follow-on Navy analyses. The program coordinates Navy's position for the enhanced planning process and conducts net assessments. It serves as the lead campaign analysis to approve Navy warfare and support requirements. The program supports "A Cooperative Strategy for 21st Century Seapower 21" as modified by the Maritime Strategy which charts a course for the Navy, Coast Guard and Marine Corps to work collectively with each other and international partners to prevent crises from occurring or reacting quickly should one occur to avoid negative impact to the United States. It serves as an independent assessor providing a broad-view perspective across the Navy staff apart from resource sponsors, with an integrated look at both war fighting and war fighting support programs. The program supports the world class modeling efforts to attain a level of Modeling and Simulation (M&S) capability that is world class and establishes the Navy as a leader in the Department of War (DoW) M&S community. It provides Navy alternatives in assessing the implications embedded within resource decisions in a quantified context of costs versus capability versus risk. The program provides independent analytic support to Navy leadership in conjunction with various executive level decision forums. It develops tools and analytical methodologies that assist in evaluating Navy programs and provides technical leadership for the analysis functional area of Naval Modeling and Simulation.

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Navy	Date: April 2026
Appropriation/Budget Activity 1319: *Research, Development, Test & Evaluation, Navy I* BA 6: *RDT&E Management Support*	**R-1 Program Element (Number/Name)** PE 0605853N *I Management, Technical & Intl Supt*

PU 3017 Enterprise Information Systems:

This project funds the Office of Naval Research (ONR) Next Generation Enterprise Network (NGEN) Information Technology corporate costs.

PU 3312 MTMD - Maritime Theater Missile Defense Forum:

This project funds two interdependent efforts: developing the next generation of interoperability capabilities to support burden sharing with high-end warfighting nations (including Australia, Belgium, Canada, Denmark, France, Germany, Italy, Netherlands, Norway, Spain, United Kingdom and the United States) and testing warfighter proficiency against high-end targets that emulate complex threats. This project assesses to participating nations' ability to share the burden of NATO Ballistic Missile Defense (BMD), currently filled by US forces in Europe. Engineering analysis and data analytics from sponsored test events are provided to European and Pacific Combatant Commands in direct support of theater Integrated Air and Missile Defense (IAMD) priorities. The MTMD Forum addresses challenges associated with integrating maritime Allied Air Defense in Support of Ballistic Missile Defense Operations into joint IAMD command and control. MTMD Forum nations leverage At-Sea Demonstration (ASD) test events, coupled with operational Fleet Exercises (Formidable Shield and Pacific Dragon), to integrate technology and validate national capabilities in operational constructs, supportive of operational force employment.

The MTMD Forum accelerates national development of systems and practices that enhance protection and defense against the proliferation of short, medium and long-range Ballistic Missile (BM) and Advanced Anti-Ship Cruise Missile (ASCM) threats through the development of interoperable sea-based Integrated Air and Missile Defense (IAMD) capability among MTMD Forum nations. The MTMD Forum enhances utilization of existing sea-based IAMD systems to protect against current threats, while measuring progressive improvement and development of compatible systems to better counter evolving threats.

The program encompasses the spectrum from in-service testing and demonstration in order to evaluate participating nations' ability to fight tonight, to theoretical development of the replacement technologies for current link interoperability. Leveraging modeling and simulation, hardware in the loop testing, and at sea exercises, this program is able to quantitatively deliver improvements in IAMD within partner nations.

PU 3330 Naval Research Laboratory (NRL) Facilities Modernization:

This program has been established to provide a systematic and planned approach to improve vital in-house science and technology (S&T) laboratory facilities which are reaching or have reached critical stages of deterioration. The program includes restoration and modernization (R&M) initiatives for about 350,000 net square feet, where the average age of the buildings is 67 years old.

PU 3363 PACOM Initiative:

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Navy	Date: April 2026
Appropriation/Budget Activity 1319: *Research, Development, Test & Evaluation, Navy I* BA 6: *RDT&E Management Support*	**R-1 Program Element (Number/Name)** PE 0605853N *I Management, Technical & Intl Supt*

This project supports the China Strategic Initiative (CSI) and Pacific Multi-Domain Training and Experimentation Capability (PMTEC) efforts. The CSI program is U.S. Indo-Pacific Command's (INDOPACOM) first Asia Rebalance initiative and provides cutting-edge research on adversary approaches to warfare, monitoring and analysis of adversary social media and censorship, unique understanding of effects of U.S. actions at the strategic and operational levels, sponsorship of Track 1.5/2 Strategic Nuclear Dialogue with China, etc. This funding is for a classified effort and details can be provided at a higher classification level.

Pacific Multi-Domain Training and Experimentation Capability (PMTEC) is foundational to meeting Commander, USINDOPACOM's high-end warfighting capability, theater force posture, and Ally & Partner (A&P) objectives through the execution of joint experimentation in the Indo-Pacific. PMTEC is the joint synchronizer and integrator by bringing together OSW, Service RDT&E, other government agencies, industry, and academia with Combatant Commands, Service Components, warfighting units, and A&Ps to expedite experimentations of R&D projects/prototypes and to facilitate more rapid modernization and interoperability.

In FY 2027, the Joint Fires Network (JFN) will deliver and test new software capabilities, multi-level security (MLS) capability enhancements and infrastructure deployments. JFN will deliver new command and control software capabilities and establish automated connections between JFN and service command and control systems, ISR systems and fires systems to enable collaborative planning and execution monitoring. The JFN system will integrate Generative AI models in special access facilities to enable decision superiority for fires across the joint force. Additionally, FY 2027 will see the delivery of JFN Operations Centers and nodes in both USINDOPACOM and USEUCOM.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

The FY 2026 spend plan amount for Research, Development, Test and Evaluation, Navy includes $133,538 thousand of discretionary and $68,292 thousand of mandatory (reconciliation) for a total of $201,830.

A. Mission Description and Budget Item Justification

Provides funding for program management, execution, and support activities to implement a broad range of cooperative naval Research and Development, Test and Evaluation (RDT&E) initiatives to improve coalition interoperability, harmonize U.S. Navy requirements with allied and friendly nations and identify cooperative international opportunities. The funding is used to develop approaches to international cooperation consistent with combatant commanders (COCOMs), Chief of Naval Operations (CNO), and Secretary of the Navy (SECNAV) priorities in the maritime domain.

Various cooperative RDT&E programs, projects and exchanges are pursued to identify cooperative acquisition programs, enhance Overseas Contingency Operations (OCO) efforts, fill capability gaps, improve US/coalition interoperability, and standardize defense capabilities with international partners. Such efforts have resulted in:
1. Negotiating and developing approximately 57 international RDT&E Agreements annually with allied and friendly nations;
2. Executing Information Exchange Annexes (IEAs) with foreign partners;
3. Improving IEA information dissemination with allied and friendly countries and within Department of the Navy (DON);
4. Coordinating Navy inputs to the Office of the Under Secretary of Defense (OUSD) Acquisition and Sustainment (A&S) Foreign Comparative Test (FCT) Program, and Coalition Warfare Program (CWP) as well as the DON Technology Transfer Security Assistance Review Boards (TTSARB).
5. Representing the U.S. Navy in Office of the Secretary of War (OSW) directed Armaments Cooperation Forums, including the Conference of North Atlantic Treaty Organization (NATO) Armaments Directors' groups (NATO Naval Armaments Group (NNAG)), and Senior National Representative (SNR);
6. Funding of various international RDT&E support databases including Technical Project Officer (TPO), International Agreement Generators, Information/Data Exchange Agreements, and Project Agreements/Memorandums of Understanding;
7. Funding for Engineering and Scientist Exchange Program (ESEP).

A. Mission Description and Budget Item Justification

Naval War College (NWC) research, analysis and gaming activities serve as a focal point, stimulus, and major source of strategic and operational thought within the Navy, Joint and Interagency communities. These efforts generate strategic and operational alternatives, tactical imperatives, quantitative analysis, war gaming, political-military assessments, and provide recommendations to the Chief of Naval Operations (CNO), Fleet Commanders and numbered Fleet Commanders regarding the formulation and execution of maritime options for the President of the United States.

Description: Naval War College (NWC) research, analysis and gaming activities serve as a focal point, stimulus, and major source of strategic and operational thought within the Navy, Joint Force, and Interagency. These efforts generate timely and relevant strategic and operational alternatives; tactical imperatives; qualitative analysis; war gaming; quantitative and qualitative political-military assessments; and provide informed recommendations to the Chief of Naval Operations (CNO); Naval Fleet, Component, and Type Commanders; Combatant Commanders; the US Intelligence Community; and other US Government Departments and Agencies regarding the formulation and execution of maritime options for the President of the United States. Naval War College (NWC) conducts research in strategic studies in response to tasking from the Secretary of the Navy (SECNAV); Chief of Naval Operations (CNO); Naval Fleet, Component, and Type Commanders; and Combatant Commanders. NWC research includes strategic documents produced by its Chinese Maritime Studies Institute (CMSI), Russia Maritime Studies Institute (RMSI), Cyber Innovation Policy Institute (CIPI), and the Brodie Group. ***FY 2026 Plans:*** - Conduct 66 events supporting research and analysis projects and provide support for OPNAV; Naval Component, Type, and Fleet Commanders; and Combatant Commanders, to include engagements with Commanding Officers, distinguished visitors, and General / Flag Officers.

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
Description: Naval War College (NWC) conducts strategic and operational war gaming and directed research for Office of the Chief of Naval Operations (OPNAV); Naval Fleet, Component, and Type Commanders; and the Combatant Commanders. Each year, 45-60 major war games and associated events provide support to efforts that explore and analyze military, political, informational and economic aspects of differing strategic and operational scenarios and tactical imperatives. NWC continues to expand its capability and capacity to execute war games of increased scope, magnitude, and complexity. ***FY 2026 Plans:*** - Continue to foster cooperative relationships with international partners through use of war gaming, research, analysis and education. - Conduct 42 events supporting 8 Executive Committee and CNO approved war games and Navy Title X war games, directed research, and analysis. - Continue to foster cooperative relationships with international partners through use of war gaming, research, analysis and education. - Refine capstone war gaming exercises that supported the International Maritime Staff Operators Course. - Execute Fleet Synchronization Conferences. - Execute capstone war game exercise for the Joint Force Maritime Component Commander (JFMCC) Course. - Resource and provision life cycle maintenance requirements for networks, communications, and modeling and simulation capacity. - Resource and provision required manpower and equipment for the High Security Research and Wargaming Facility." ***FY 2027 Base Plans:*** - Infrastructure Enhancement: Upgrade computer hardware for Virtual Wizard, provide display monitors for the M&S battle lab in Sims Hall, and extend TS Gamenet connectivity to various naval commands (NIWDC, NAWCAD, QCI, PACFLT, NAWDC) via JIOR. - ISR Adjudication: Utilize Virtual Wizard to adjudicate the ""Find, Fix, Track"" phases of the kill chain, displaying results on the WGD Cesium COP tool. This involves integrating Virtual Wizard with the WGD SQL Database, developing 2027 Space Order of Battle (OOB) and space sensor rulesets, and creating scripts for converting detections to COP perception levels for Global 21. Scenario development and developer travel are also included. - Kinetic/Non-Kinetic Adjudication & ISR Improvements: Develop scenarios for kinetic engagements, build interfaces between the WGD SQL database and Virtual Wizard for player input and result transfer, and incorporate player orders from the move tool. This also includes NGTS model development for new entities

A. Mission Description and Budget Item Justification

Navy Postgraduate School (NPS) research and analysis activities serve as a focal point, stimulus, and major source of strategic, tactical and operational thought within the Navy communities. These efforts generate strategic and operational alternatives, tactical imperatives, quantitative analyses, technical developments and assessments, and political-military assessments. Also, provide recommendations to the Chief of Naval Operations (CNO), Fleet Commanders and numbered Fleet Commanders regarding the formulation and execution of maritime options for the President of the United States. Research will be conducted that will enhance graduate education for Naval Officers and potentially provide students with areas of studies for theses and faculty projects. These research activities also serve as a means for OPNAV Resource Sponsors and Major Commands to have analysis and decision support research conducted in the uses of the applied, soft, and hard sciences in solving diverse and complex resource allocation and strategic issues facing the Navy today and envisioned in the future.

A. Mission Description and Budget Item Justification

This exhibit has been updated to reflect the establishment of the Navy Analytic Office (NAO), which is responsible for the executive oversight of Navy studies and analysis. The NAO was stood up to better align the annual Analytic Agenda to Chief Naval Operation's (CNO) strategic priorities while also providing for study of the more tactical requirements of the Fleet and Navy writ large. The outcome will be synchronized modeling, simulation, assessments, wargames, experiments and exercises providing rich, shared data to support and refine warfighting concepts and to inform budget decisions.

The Navy Annual Studies Program supports the Analytic Agenda by providing both the development and use of modeling, simulation and analytically-based warfare, business analyses and analytic tools that provide the basis for decision making with respect to concepts of operations (CONOPS), Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) Systems; warfare systems, and analytical underpinnings/basis for programmatic decisions of the Navy's top leadership regarding their architectures, force structure, and the Navy's core "organize, train, and equip mission" (the warfare and provider Enterprises). The program provides capability-based planning assessment for Joint Capabilities Integration and Development System (JCIDS), conducts analysis to affect warfighting capability trades and enterprise resources, identifies needs, gaps and overlaps, and assesses alternative solutions to Joint needs. The program provides overarching Planning, Programming, Budgeting and Execution System (PPBES) analyses and guidance for PPBES which provides gap analysis and investment strategy and total obligation authority allocation. It provides independent capability analysis and assists in structuring follow-on Navy analyses. The program coordinates Navy's position for the enhanced planning process and conducts net assessments. It serves as the lead campaign analysis to approve Navy warfare and support requirements. The program supports the Maritime Strategy which charts a course for the Navy, Coast Guard and Marine Corps to work collectively with each other and international partners to prevent crises from occurring, or reacting quickly should one occur to avoid negative impact to the United States. The Studies Program provides a broad-view perspective across the Fleet and Navy staff, with an integrated look at both warfighting and warfighting-support programs. It provides Navy alternatives in assessing the implications embedded within resource decisions in a quantified context of costs versus capability versus risk. The program provides independent analytic support to Navy leadership in conjunction with various executive level decision forums.

This project funds concept development engineering, mission effectiveness analysis, and other analyses for formulation of future surface ship and associated platform force structure along with development of the tools to accomplish these efforts. Advanced platform concept studies and systems technology assessments will be conducted as will the development and upgrade of concept design and engineering tools, methods, and criteria. Concept Formulation (CONFORM)/Concept Development and Experimentation (CDE) for ships, boats and unmanned maritime vehicles must be continuously exercised to remain viable. It takes years to train competent practitioners, and knowledge currency is quickly lost without practice. Evolving threats and technologies drive concepts (and the tools, processes, and skills needed to produce them) towards obsolescence without constant attention. Capability Based Assessments and Analysis of Alternatives (AoA) timelines are insufficient for establishing potential material solution cost versus capability relationships without significant concept formulation work beforehand. Active collaboration between the Office of the Chief of Naval Operations requirement sponsors, Program Offices, and the various System Commands (Naval Sea Systems Command, Naval Air

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026

Systems Command and Space and Naval Warfare Systems Command) engineers is critical for fully exploring the trade space by conducting analysis for affordability, effectiveness and risk. The majority of Total Ownership Cost (TOC) is locked into a design before it is even a program. In the later stages of a program it becomes much more costly to make changes that will significantly impact TOC. Investment up front in concept design can have a high payoff in TOC reduction over the life of a platform class. Outputs include concept costing and performance parameterization for comparative assessment against capability objectives and synthesis to quantify overall (Fleet) capabilities. These products (expressions of cost vs. capability) will serve as the basis of requirements and Joint Capabilities Integration and Development System analysis, define the trade space for AoA efforts, and underpin discussion of force architecture/structure during Quadrennial Defense Review, Long Range Shipbuilding Strategy builds, and Joint Requirements Oversight Council reviews.Perform-2-Plan(P2P) analytical Studies will continue to create a shared understanding of organizational metrics that includes understanding the effort needed to achieve a more complex readiness success, elevating barriers and matters requiring Echelon I leadership action to resolve, fostering a data-driven decision culture and simplifying and standardizing metrics reporting to spotlight issues and improve problem-solving. Utilize the LCS driver tree framework to assess the significance of different variables that may impact the number of LCSs to support operational requirements, develop advanced analytic models using machine learning techniques and Monte Carlo simulation based on the LCS P2P driver tree. The analytical model will forecast the numbers of mission ready LCS, parts shortages, unplanned down days, and/or CASREPs/CANNABs. The analytical model will serve as the basis for prioritizing and assessing how resources can best be allocated to improve LCS readiness as well as identify key actionable drivers that result in a decrease in LCS mission readiness and increase unplanned down days.

Develop a prescriptive analytics model to determine the cost-minimizing driver levels to achieve a greatly increased number of mission ready LCS while reducing unplanned down days. Assess costs associated with various combinations of driver levels that would achieve target levels of performance.

Capabilities-Based Assessment (CBA) is the Joint Capabilities Integration and Development System (JCIDS) analysis process that includes three phases: Functional Area Analysis (FAA), Functional Needs Analysis (FNA), and Functional Solution Analysis (FSA). The results of the CBA are used to develop a joint capabilities document (based on the FAA and FNA) or initial capabilities document (based on the full analysis). CBA funding provides the resource sponsors the means to develop the analytic underpinning required by Chairman of the Joint Chiefs of Staff Instruction 3170.01G to support the determination of Naval warfighting capabilities and force structure needed to support the Joint Requirements Oversight Council (JROC)/JCIDS requirements validation process and to inform Program Objective Memorandum programming decisions. This analysis includes evaluation of integration and interoperability gaps of both current and future Navy platforms and systems capabilities.

A. Mission Description and Budget Item Justification

In partnership with the Critical Infrastructure Defense Analysis Center (CIDAC), the Department of the Navy (DON) will support the Mission Assurance (MA) program in performing mission analysis, engineering and commercial infrastructure network interdependency analysis, MA assessments, information enterprise design, implementation, and support, and defense industrial base supply chain network and related analysis. These efforts will provide broad leadership, best practices, research, development, coordination, and support to Department of War (DoW) Components around specific focus areas to drive solution-oriented efficiencies, collaboration, and results that benefit the entire DoW MA enterprise.

A. Mission Description and Budget Item Justification

This project funds two interdependent efforts: developing the next generation of interoperability capabilities to support burden sharing with high-end warfighting nations (including Australia, Belgium, Canada, Denmark, France, Germany, Italy, Netherlands, Norway, Spain, United Kingdom and the United States) and testing warfighter proficiency against high-end targets that emulate complex threats. This project assesses the participating nations' ability to share the burden of NATO Ballistic Missile Defense (BMD), currently filled by US forces in Europe. Engineering analysis and data analytics from sponsored test events are provided to European and Pacific Combatant Commands in direct support of theater Integrated Air and Missile Defense (IAMD) priorities. The MTMD Forum addresses challenges associated with integrating maritime Allied Air Defense in Support of Ballistic Missile Defense Operations into joint IAMD command and control. MTMD Forum nations leverage At-Sea Demonstration (ASD) test events, coupled with operational Fleet Exercises (Formidable Shield and Pacific Dragon), to integrate technology and validate national capabilities in operational constructs, supportive of operational force employment.

The MTMD Forum encourages national development of systems and practices that enhance protection and defense against the proliferation of short, medium and long-range Ballistic Missile (BM) and Advanced Anti-Ship Cruise Missile (ASCM) threats through the development of interoperable sea-based Integrated Air and Missile Defense (IAMD) capability in the near term and also pushes partners to develop future interoperability technologies.

The program leverages the full spectrum of capability development, from theoretical work with allied partners to examine future interoperability opportunities to testing in service interoperability in the integrated air and missile defense domain. One of the future technologies that the Forum is leading is the Force Level Open Architecture Technical Standard (FLOATS), a potential replacement or augmentation to traditional Link 16 architectures. The program has already developed four of eight planned data models and is pursuing capability demonstration through the modeling and simulation resources funded through the Forum. In service ballistic missile defense and other air defense compatibility is actively tested in a hardware in the loop environment called Coalition Distributed Engineering Plant (CDEP). This low-cost lab testing enables the US to evaluate partner performance before at sea testing. The highest impact effort remains with the at sea testing, where the program supports both warfighter readiness against ballistic threats and evaluates partner performance against relevant, high-end targets.

FY 2026 Plans:					

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026
Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0605853N / *Management, Technical & Intl Supt*	**Project (Number/Name)** 3312 / *MTMD-Maritime Theater Missile Defense Forum*

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
The BMC4I team will continue collaborating with the Systems Engineering Team (SET) and MTMD working groups to enhance Integrated Air and Missile Defense (IAMD) interoperability and capabilities within coalition maritime forces. Efforts will focus on identifying and addressing interoperability and capability gaps using data from test events, expert analyses, and coalition reports. The team will provide Information Exchange Requirements (IER) to support modeling and simulation (M&S), distributed engineering exercises, and at-sea or hardware-in-the-loop (HWIL) testing. Coordination will extend to open architecture initiatives, force-level function development, and integration of warfighter tactics to draft Target Architecture 4 (TA4) objectives aligned with the MTMD Forum's IAMD vision. Additionally, the team will conduct detailed analyses of Link 16 message implementations across member nations, assess the Common Tactical Picture (CTP), and develop an IAMD maturity model to track capability progression. The M&S group will analyze target architectures, refine IERs, and ensure coalition partners have access to simulation tools. They will model future architectures, support at-sea demonstrations, and develop mission models to evaluate operational impacts of proposed solutions. These efforts aim to reduce costs by minimizing live testing while advancing IAMD capabilities. The Coalition Distributed Engineering Plant (CDEP) will assess joint air and land asset interoperability during annual test events and provide technical support for hardware-in-the-loop testing. CDEP will collaborate with BMC4I to address coalition capability gaps, conduct experimental tests, and recommend improvements to information exchanges while reducing detectability by adversaries. The Open Architecture group will conduct modeling and simulation tests to validate the Force Level Open Architecture Technical Standard (FLOATS) and advocate for its adoption as a NATO standard. They will continue developing FLOATS data models, and plan for future iterations. The group will support FLOATS integration into U.S. Navy and allied programs, develop operational test designs, and prepare for platform implementation. The Test Planning and Execution (TPEX) group will support at-sea test events, including Pacific Dragon 26 (PD26) in FY26. This exercise, endorsed by INDOPACOM and PACFLT, will involve live-fire IAMD events with coalition ships, aircraft, and sensors, focusing on allied interoperability. The U.S. will also test new sensor-effector pairings in a live operational environment. Data analysis from these demonstrations will inform future exercises, such as Formidable Shield 27 and Pacific Dragon 28, by identifying capability gaps and potential solutions.					

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026
Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0605853N / *Management, Technical & Intl Supt*	**Project (Number/Name)** 3312 / *MTMD-Maritime Theater Missile Defense Forum*

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total

The Operational Requirements group will provide operator perspectives to inform engineering and testing activities. Their collaboration with the Naval Surface & Mine Warfare Development Command (SMWDC) and Naval Sea Systems Command (NAVSEA) will ensure alignment between operational needs and technical solutions, fostering stronger allied integration.

International experimentation will continue to support Maritime Theater Missile Defense activities, including COMPACFLT's Pacific Dragon and COMNAVEUR's Formidable Shield exercises. These efforts will advance coalition IAMD capabilities, improve interoperability, and address emerging challenges in joint maritime operations.

FY 2027 Base Plans:
In FY27, the BMC4I team will continue its mission to enhance Integrated Air and Missile Defense (IAMD) interoperability and capabilities within coalition maritime forces. The team will focus on defining Target Architecture 4 (TA4). Efforts will include identifying and addressing interoperability and capability gaps through data analysis from Formidable Shield 27 (FS27), Pacific Dragon 26 (PD26), and other coalition exercises. BMC4I will provide updated Information Exchange Requirements (IER) to support Modeling and Simulation (M&S), Coalition Distributed Engineering Plant (CDEP) exercises, and Test Planning and Execution (TPEX) at-sea events. The team will also expand its detailed analysis of Link 16 message implementations to ensure proper tactical data exchange across all member nations. Collaboration with the Interoperability and Common Tactical Picture (IaCTP) project will continue focusing on refining the IAMD maturity model and assessing Common Tactical Picture (CTP) support of joint coalition operations.

The M&S group will model and analyze TA5 concepts, providing insights into the efficacy of future IAMD architectures. They will continue developing mission models to evaluate the operational impact of proposed solutions and support cost avoidance by reducing reliance on live testing. M&S will ensure coalition partners maintain access to simulation tools and will expand their efforts to include advanced synthetic environments for testing emerging technologies. These simulations will inform the design of future at-sea demonstrations and validate proposed solutions to complex IAMD challenges.

The CDEP team will assess interoperability of joint air, land, and maritime assets during Annual Test Events (ATEs) and provide technical support for hardware-in-the-loop testing. CDEP will collaborate with BMC4I to address gaps identified in FS27 and PD26, focusing on improving information exchanges and reducing

Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0605853N / *Management, Technical & Intl Supt*	**Project (Number/Name)** 3312 / *MTMD-Maritime Theater Missile Defense Forum*

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
detectability by adversaries. The team will also explore experimental systems and pathways to integrate advanced technologies, such as artificial intelligence and machine learning, into coalition operations. The Open Architecture group will continue advocating for Force Level Operational Architecture Technical Standard (FLOATS) as a NATO standard and supporting its integration into U.S. Navy and allied programs to ensure advanced interoperability and decisive advantage. The group will also continue validation of the FLOATS data model through an M&S implementation begun in FY26. The TPEX group will prepare for and execute At Sea Demonstration/Formidable Shield 27 (ASD/FS27), focusing on live-fire IAMD events and allied interoperability assessments. These exercises will include advanced sensor-effector pairings, live tracking events, and a combination of live and simulated engagements. TPEX will leverage data from prior events to refine planning and execution, ensuring alignment with coalition objectives. The group will also support the development of new IAMD targets and the development of innovative testing methodologies to address emerging threats. An effort to present vehicles flying hypersonic velocity trajectories for detection and tracking by the joint maritime force in collaboration with the Multiservice Advanced Capability Hypersonic Test Bed program is developing with an objective to be conducted during ASD/FS 27. The Operational Requirements group will continue providing operator perspectives to inform engineering and testing activities. Their collaboration with the Naval Surface & Mine Warfare Development Command (NSMWDC) and Naval Sea Systems Command (NAVSEA) will ensure that warfighter needs are integrated into technical solutions. The group will also work closely with coalition partners to align tactics, techniques, and procedures (TTPs) with evolving IAMD capabilities. ***FY 2027 OOC Plans:*** N/A ***FY 2026 to FY 2027 Increase/Decrease Statement:*** Slight decrease reflects a reduction in capability and analysis efforts.

A. Mission Description and Budget Item Justification

This program provides a systematic and planned approach to improve vital in-house science and technology (S&T) laboratory facilities which are reaching or have reached critical stages of deterioration at the Naval Research Laboratory (NRL), where the average building age is 70 years old, as of 2025.

Critical S&T research cannot be sustained or succeed in deteriorated facilities. World class research can only be accomplished in facilities that are at a minimum "adequate", but preferably "state-of-the-art." Due to their advanced age and deterioration, funds will be used for restoration and modernization efforts in support of NRL's research mission of meeting future technological threats and providing support to the warfighter.

A. Mission Description and Budget Item Justification

China Strategic Initiative (CSI) became a DoW RDTE program in FY 2014. The CSI program is U.S. Indo-Pacific Command's (INDOPACOM) first Asia Rebalance initiative and provides critical support to planning efforts across the Command addressing Secretary of Defense's # 1 priority. CSI is a command-directed program that provides the Commander, INDOPACOM, and his staff vital support at all levels of planning and decision-making within the INDOPACOM Area Of Responsibility. The CSI program provides: cutting-edge research on adversary approaches to warfare, monitoring and analysis of adversary social media and censorship, unique understanding of effects of U.S. actions at the strategic and operational levels, sponsorship of Track 1.5/2 Strategic Nuclear Dialogue with China, etc. This funding is for a classified effort and details can be provided at a higher classification level.

Pacific Multi-Domain Training and Experimentation Capability (PMTEC) is foundational to meeting Commander, USINDOPACOM's high-end warfighting capability, theater force posture, and Ally & Partner (A&P) objectives through the execution of joint experimentation in the Indo-Pacific. The innovative combinations of new technology, capability, and CONOPS in Joint Exercises will enable integration, warfighting assessment, and rapid capability development. PMTEC is the joint synchronizer and integrator by bringing together OSW, Service RDT&E, other government agencies, industry, and academia with Combatant Commands, Service Components, warfighting units, and A&Ps to expedite experimentations of R&D projects/prototypes and to facilitate more rapid modernization and interoperability.

The Joint Experimentation Program (JExP) is a theater-wide campaign of joint experiments to inform and strengthen the ability of joint and combined forces to execute all-domain operations in contested environments. JExP is focused on both what the U.S. and allies can do to protect partners subjected to military aggression, and also what those partners can do to defend themselves against said aggression. To determine the readiness of developmental systems to operate within the contested environment, JExP consists of three experimentation categories/pillars:
a. Joint Experimentation within Exercises
b. Stand-alone Experimentation
c. Joint International Experimentation
The Research, Development, Test & Evaluation funds materiel, both commercial and government off the shelf systems, required to execute international experiments to include support equipment and/or developmental software and systems for potential leave-behind capabilities. Lastly, it funds the logistics required to deploy, install, and remove any specific developmental equipment required for JIE.

Description: China Strategic Initiative (CSI): RDTEN funding supports critical classified research that directly advances the core mission and functionality of INDOPACOM's China Strategic Initiative (CSI - a DoW program of record). CSI informs senior U.S. Gov't / DoW policymakers with long-term & strategic insights into China actions/policies across the spectrum, including domestic/foreign policymaking, political thinking, military policies, economic policies, and many other areas. Part of CSI consists of a series of integrated analytical working groups comprised of experts from the U.S. Gov't (Policy, planning, and intelligence), Federally Funded Research and Development Corporations (FFRDCs), academia, and private industry. All INDOPACOM CSI efforts are overseen by a 25-member CSI Review Board (CRB) to ensure all CSI programs are integrated and not redundant. All program efforts are done under direction of OSW and the China Strategic Roundtable, supporting strategic competition with China, DoW's top priority for defense planning. CSI program is DoW/ PACOM's first Rebalance to Asia initiative issue nomination priority. ***FY 2026 Plans:*** N/A ***FY 2027 Base Plans:*** N/A ***FY 2027 OOC Plans:*** N/A ***FY 2026 to FY 2027 Increase/Decrease Statement:*** Decrease reflects a reduction in research, analysis, and strategic insights.

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
PMTEC is foundational to meeting Commander, USINDOPACOM's high-end warfighting capability, theater force posture, and Ally & Partner (A&P) objectives through the execution of joint experimentation in the Indo-Pacific. The innovative combinations of new technology, capability, and CONOPS in Joint Exercises will enable integration, warfighting assessment, and rapid capability development. PMTEC is the joint synchronizer and integrator by bringing together OSW, Service RDT&E, other government agencies, industry, and academia with Combatant Commands, Service Components, warfighting units, and A&Ps to expedite experimentations of R&D projects/prototypes and to facilitate more rapid modernization and interoperability. PMTEC Support provide mission integration of Service capabilities into joint warfighting capabilities and concepts. This is accomplished through theater scale joint field experimentation focused on high-end warfighting, emphasizing a combination of Service exercises, Joint exercises, and stand-alone warfighting experiments. Theater scale joint experimentation will require the design and engineering of integrated Services' capabilities and the associated networking and peering of Services' live, virtual and constructive test and training range facilities. This will be extensible to allies and partners to create the required common joint environment. ***FY 2026 Plans:*** FY 2026 funding continues to support the physical and virtual infrastructure in the INDOPACOM PACIFIC Multi-Domain Training and Experimentations Capability (PMTEC). This includes critical support to enhance Missile Defense Agency Integrated Air Missile Defense (IAMD) Tactical System Integration Labo (TSIL) Support. Missile Defense Agency will provide INDOPACOM with INTEGRATED AIR MISSILE DEFENSE SPECIFIC SIMULATION SOFTWARE TO SUPPORT IAMD and other select vignettes during Joint Exercises within the USINDOPACOM Joint Exercise Program. This software enhances the live Virtual and Constructive (LVC) environment across ground, maritime and air domains for a realistic and challenging scenario and vignettes. ***FY 2027 Base Plans:*** FY 2027 funding continues to support the physical and virtual infrastructure in the INDOPACOM PACIFIC Multi-Domain Training and Experimentations Capability (PMTEC). A. Mission Description and Budget Item Justification

The project provides analytical support to the Director, Undersea Warfare Division as a basis for major policy, planning, and acquisition program decisions. It supports the development of the Submarine Force strategic vision to guide research and development investment strategy and future planning. Additionally, this line supports studies in the area of submarine and undersea surveillance missions, force structure, payloads and sensors, and force employment.

A. Mission Description and Budget Item Justification

This project provides analytical support to the Director, Undersea Warfare as a basis for major policy, planning, and acquisition program decisions. It supports studies in the area of undersea surveillance missions, sensor system communications, and acoustic performance prediction systems, environmental and medical effects of acoustic systems, operational security, and future threat analysis. Supports synthetic mission lay down simulations for Integrated Undersea Surveillance System (IUSS) strategic planning and resource allocation. Supports continued development and documentation of architecture for future undersea surveillance capabilities and systems. Supports studies to determine long-term impact of IUSS active sensors on marine animals and development of Surveillance Towed Array Sensor System (SURTASS) Low Frequency Active (LFA), and Compact LFA (CLFA).

A. Mission Description and Budget Item Justification

This continuing program provides support for the Self Defense Test Ship and developmental test squadron aircraft required to support Research, Development, Test and Evaluation (RDT&E) of new systems. The RDT&E ship and aircraft inventory is required to adequately test modifications and improvements to fielded weapon systems and sensors and new weapon systems and sensors and evaluate modifications to address new threat capabilities to increase the warfighting capability of the fleet. The program provides integrated logistics support for aircraft at selected field activities, provides depot-level maintenance of aircraft, engines and components for the Navy's inventory of RDT&E aircraft; and provides support for DON aircraft in the custody of contractors in support of RDT&E. The Self Defense Test Ship is a remotely operated platform that supports the test and evaluation of surface ship sensors, combat systems and weapons within the close-in self defense zone. Cost covered under this element include test execution for the Air Warfare Ship Self-Defense Enterprise, aircrew training and proficiency, fuel, supplies, equipment, repair and Aviation Depot Level Repairables, as well as organizational, intermediate and depot maintenance of aircraft in the Navy RDTE inventory and the Self Defense Test Ship. Threat engineering provides test and evaluation (T&E) modeling and simulation (M&S) products and informs targets, simulators, and stimulator designs and development. This project satisfies Surface Navy advanced missile system threat characterization and verification, validation, & accreditation (VV&A) requirements for testing

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

Research, Development, Test and Evaluation (RDT&E) Aircraft Flight Hours: This non-acquisition project supports direct flight hour costs, which include aviation fuel and a portion of the costs of Aviation Depot Level Repairables (AVDLR) associated with NAVAIR test pilot proficiency flights, including organizational and intermediate maintenance, associated consumables, including petroleum, oil, lubricants, and spare and replacement parts for components that fail. Annual test pilot flight hours, as delineated in OPNAVINST 3710.7, are satisfied through a combination of program funded test flights, which vary year to year based on program schedules; flights funded through this project unit ensure a baseline level of pilot readiness. These flight hours ensure test pilots remain proficient in assigned type / model / series aircraft in which they are qualified (approximately 3 hours per month) during lulls in program test schedules to ensure proficient test pilots are available to safely support aviation program testing. Readiness hours are designed to provide aircrew with a minimum of 11 flight hours per month, for a total of 133 hours annually. Flight hours support ferry flights to Fleet Readiness Centers for planned depot maintenance, post maintenance, acceptance test flights, aircrew training and test pilot proficiency when test program demand is low, in direct support of Research and Development Programs at Naval Air Systems Command, and Office of Naval Research flight activities.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward maintaining test pilot readiness in direct support of general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

Research, Development, Test and Evaluation (RDT&E) Aircraft Support: This continuing project funds costs associated with the preventive and corrective maintenance of fixed and rotary wing aircraft which directly support test and evaluation of aircraft and associated weapon systems and sensors. Testing aboard dedicated RDT&E aircraft reduces the number of fleet units required to support test and evaluation of aviation programs. This project unit funds airframe Standard Depot Level Maintenance (SDLM), the Integrated Maintenance Concept and Planned Depot Maintenance, major in-service repairs, emergent repairs and aircraft engine periodic maintenance and overhauls and aircraft material condition and field inspections. Also included in this project unit, are the costs of Aviation Depot Level Repairables (AVDLR), which are spare and replacement parts for components that fail during the conduct of readiness flight operations, aircrew training and proficiency flight hours, and must be replaced to support follow-on flight operations. This project unit also funds Aircraft Structure Periodic Assessments (ASPA), Individual Material Readiness List (IMRL) tools and support equipment, Aviation Climate Assessment Survey System (ACASS) and other projects and peripheral equipment associated with the maintenance of flight readiness for RDT&E aircraft.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing equipment required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

This project provides for labor and engineering support, preventive and corrective maintenance of mission critical Hull, Mechanical and Electrical (HM&E) and remote-control system maintenance aboard the Self Defense Test Ship (SDTS) in support of the Navy RDT&E of ship self-defense systems. Testing aboard this ship provides the capability to safely test self-defense weapon systems within their minimum range and reduces the number of fleet units required to support RDT&E efforts.

Funds are used to purchase consumable supplies and repair parts, conduct routine preventive and emergent corrective maintenance and engineering support services and the necessary personnel to support at-sea operations.

A. Mission Description and Budget Item Justification

The Testing & Evaluation (T&E) Enterprise merges common ship, element, and system requirements into the fewest number of test events while leveraging planned Combat System Ship Qualification Trials (CSSQT) to accomplish Developmental Testing (DT) and Operational Testing (OT) requirements. All tests on the SDTS require the sharing of infrastructure, missile range allocations, execution time, and underway time to eliminate duplicative testing. T&E Enterprise provides end-to-end mission Operational Testing in a realistic operational environment, capitalizing on Probability of Raid Annihilation Modeling and Simulation (M&S) data validated with results of Operational and Live Fire Testing, and ensuring a consistent approach across ship classes. Applicability of all test events is beneficial across multiple ship classes with the same variation under test.

Currently executing Test & Evaluation Master Plan (TEMP 1910) in support of Ship Self Defense System (SSDS) Baseline 12 and SPY-6(V)2/3 Platforms. TEMP 1910 merges common ship, element, and system requirements into the fewer test events.

Enterprise Cost elements:

a) Enterprise Testing and Planning. Includes the contractor and government costs to administer the Enterprise, collect and distribute data from live events, maintain Cybersecurity certifications, and financial management.

b) Self-Defense Test Ship (SDTS) Combat Systems. Includes preventive maintenance and repairs of major combat system elements.

c) Enterprise Testbed (ETB). Requires integration of OT-quality digital representations of shipboard combat system performance including infrastructure, distributed secure network, and common environmental services for DT/OT.

d) SDTS Integrated Testing (IT). SDTS testing requirements outlined in TEMP 1910 in support of SSDS Baseline 12 and SPY-6(V)2/3 Platforms.

Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0605863N / *RDT&E Ship & Aircraft Support*	**Project (Number/Name)** 3206 / *T&E Enterprise*

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
a) Test planning necessary to conduct testing of the SSDS BL 12 CS variants in support of TEMP 1910 planned events. b) Continue to provide overall technical management and financial execution support for the T&E Enterprise. Provide aircraft services coordination, technical documentation support, and meeting coordination. 2) Self-Defense Test Ship (SDTS) Combat Systems. a) Complete installation and checkout (INCO) of combat system and weapon elements on SDTS required for AW SSD testing for CVN 79, LHA 8, and LPD Flight II. INCO includes Ship Self Defense System (SSDS), Cooperative Engagement Capability (CEC), GPNTS system, and AN/ SPY-6(V) (EASR). b) Continue routine combat systems maintenance and IA/Cybersecurity Certification and Accreditation on combat system elements and the remote control system on the SDTS. If repair parts are required to support T&E event(s), the impacted T&E User may be required to fund replacement parts. 3) Enterprise Testbed (ETB). a) Begin integration testing of ESSM Blk 1, ESSM Blk 2, RAM, and CIWS kill chains for CVN 79. b) Continue ETB virtual range development, documentation of the ETB, and coordination of a multi-organizational team to perform overarching enterprise systems engineering. Management, computing hardware, and infrastructure to support collocated and geographically distributed Testbed baselines. c) Continue to facilitate the integration of systems into the PEO IWS M&S Shared Technical Framework (STF) to allow the most efficient use of the Enterprise Test Bed (ETB). 4) Self Defense Test Ship Integrated Testing (IT) FY 26 starts execution of the multiyear Self-Defense Test Ship (SDTS) Integrated Test (IT) campaign outlined in TEMP 1910. The SDTS IT campaign progressively tests LPD Flt II, LHA 8, and CVN 79 SSDS CS BL 12 CS performance in an at-sea environment against threat representative Anti-Ship Cruise Missiles in live end-to-end scenarios. FY26 Plans include two (2) SDTS IT events. ***FY 2027 Base Plans:*** 1) Enterprise Testing and Planning: a) Test planning necessary to conduct testing of the SSDS BL 12 CS variants in support of TEMP 1910 planned events. b) Continue to provide overall technical management and financial execution support for the T&E Enterprise. Provide aircraft services coordination, technical documentation support, and meeting coordination.

A. Mission Description and Budget Item Justification

The Threat Engineering program assesses the current and future threat environment and works in coordination with the Office of Naval Intelligence (ONI) to develop, produce, and evolve digital threat engineering models in support of test and evaluation (T&E) requirements. NAVSEA requires comprehensive, validated threat modeling and simulation (M&S) products to dynamically and responsively interact with surface ship air defense systems and subsystems to allow for a performance evaluation in an operationally realistic environment. These threat M&S products, called Acquisition Threat Engineering Products (ATEP), must contain the details, features, and components necessary to react with the Blue air defense systems as the actual threats will with, deployed air defense systems to provide a comprehensive, high-confidence evaluation of Blue system capabilities. The successful and rigorous end-to-end evaluation of surface ship combat systems, to include the component systems, are required before capability and ship baselines can be delivered to the warfighter.

ATEPs are valid T&E assets that satisfy Director of Operational Test and Evaluation (DOT&E) and Operational Test & Evaluation Force (OPTEVFOR) requirements in both Modeling and Simulation (M&S) testbed and at-sea configurations. ATEPs satisfy OPTEVFOR's threat model requirement for fidelity commensurate with the Blue-force system representations and contain intel-derived lethality/vulnerability data, physics-based six degrees-of-freedom models, reactive seekers and guidance, and other engineering data. ATEPs are necessary to evaluate mandatory ship Key Performance Parameters (KPP), including operational effectiveness and suitability. ATEPs reduce Navy operational testing (OT) costs by enabling portions of OT to be conducted via M&S, increasing requirements coverage and avoiding the costs of targets and weapons that would ordinarily be required to conduct OT solely via live fire events.

As each threat system is unique, the ATEP representation of each must include the features of specific threats, such as electronic countermeasures (ECM), active countermeasures, communications links, electronic counter-countermeasures (ECCM). Furthermore, the ATEP products must capture any engineering or manufacturing uncertainties as well as intelligence uncertainties so that our Blue Systems, once deployed to the Fleet, operate in the face of these threats as they were/are designed. Finally, these ATEP products must integrate with the PEO IWS testbeds to be used in Developmental and Operational T&E. In short, each validated threat product must contain the features, components, and details necessary to evaluate the specific combat system or ship baseline.

Blue Systems face severe limitations to test, and risk delayed deployment to the warfighter without required ATEP products. ATEP products need to be developed and integrated IAW Blue System needs and schedules in order to clearly evaluate performance and enable all capabilities to be delivered to the Fleet expeditiously. Additionally, until analysis is performed using the ATEP products, it is often unclear or unknown what the impacts are due to various features and techniques found to be on threat systems. The focus is to meet combat/weapon system Systems Engineering and T&E requirements for in-service and new construction surface platforms to include:
-DDG 51 FLT III
-CVN 79
-LHD 8

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026
Appropriation/Budget Activity 1319 / 6	**R-1 Program Element (Number/Name)** PE 0605863N / *RDT&E Ship & Aircraft Support*	**Project (Number/Name)** 3238 / *Threat Engineering*

-LPD FLT II
-FFG 62 and others

Threat products must be sustained; requiring additional ATEP products development and enhancements to evolve to the next version.
-Our adversaries are continually developing new threats and upgrading and improving existing threat systems additionally our understanding of the threat foundation data may change and evolve.
-Our Blue Systems and their operational characteristics change (e.g., a new Radar may operate in a new RF Band, with different channels/bandwidth, and/or other signature requirements).

A. Mission Description and Budget Item Justification

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations and maintenance required to support research, development, test and evaluation.

This program provides institutional maintenance and operations support for: the Naval Undersea Warfare Center Detachment Atlantic Undersea Test and Evaluation Center, Andros Island, Bahamas; the Environmental Compliance Program; Naval Air Warfare Center Weapons Division, Point Mugu and China Lake, CA; Naval Air Warfare Center Aircraft Division, Patuxent River, MD; Test and Evaluation related capabilities at the Pacific Missile Range Facility, Barking Sands, HI; Maintenance and Repair at Naval Air Warfare Center Weapons Division, Naval Air Warfare Center Aircraft Division, and Naval Undersea Warfare Center Detachment Atlantic Undersea Test and Evaluation Center. The program also provides marine vessels overhauls and preventative maintenance in support of the 23 Major Range and Test Facility Base (MRTFB) marine vessel located at Naval Air Warfare Center Weapons Division, Point Mugu, CA, Pacific Missile Range Facility, Barking Sands, HI, Naval Undersea Warfare Center Keyport Nanoose and Dabob Bay Ranges, Keyport, WA, Naval Air Warfare Center Aircraft Division, Patuxent River, MD, and Naval Undersea Warfare Center Detachment Atlantic Undersea Test and Evaluation Center. The Test and Evaluation activities make up the Navy portion of the Department of War's Major Range and Test Facility Base. These activities are chartered to perform Test and Evaluation for the development and acquisition of technologically advanced weapons systems. Core Test and Evaluation capabilities and capacity are operated to obtain weapons system performance documentation for acquisition program

milestone decisions to provide operational forces with effective weapons systems. This program provides Navy Acquisition Program Managers required test capabilities; lowers cost of Test and Evaluation; removes cost and scheduling impact of developing and providing their own Test and Evaluation capabilities; and retains the physical airspace, land space and sea space needed to conduct testing.

A. Mission Description and Budget Item Justification

As a detachment of Naval Undersea Warfare Center, Division Newport, the mission of the Atlantic Undersea Test and Evaluation Center (AUTEC) is to provide the U.S. Navy an underwater range facility for full-spectrum test and evaluation of Undersea Warfare systems and for Fleet training and readiness assessment. The Atlantic Undersea Test and Evaluation Center Program Office is headquartered at Newport, RI. Atlantic Undersea Test and Evaluation Center's administrative offices are located at West Palm Beach, Florida. Test facilities are located at Andros Island, Sites 1 through 4, and the Berry Islands in the Bahamas. Atlantic Undersea Test and Evaluation Center aircraft make scheduled daily flights between West Palm Beach and Andros Town Airport.

Atlantic Undersea Test and Evaluation Center manages and, under service contract, maintains and operates a 500 square nautical mile deep-water and a 100 square nautical mile shallow-water range; air-target tracking capabilities; sonobuoy simulation systems; electronic warfare threat simulation systems; rotary wing aircraft; aircraft ground support facilities; acoustic targets; torpedo retrieval and flushing capabilities; open-ocean range craft; marine support facilities; and data processing and analysis capabilities.

Major test facilities on Andros Island are located at Site 1. The Command Control Building houses the range tracking displays and replay centers, the computer center, operations support functions, communications center, and the central timing system. The Range Support Facility houses a torpedo post-run workshop, Mark 46 /Mark 50 and Mark 54 lightweight torpedo Intermediate Maintenance Activity, a Mark 30 undersea target Intermediate Maintenance Activity, a Mark 48 heavyweight torpedo Research and Development Turnaround facility and related technical facilities. The complex includes electrical and physical calibration labs, a complete electronics maintenance shop, a dive locker, a precision machine shop, and logistics support areas.

Atlantic Undersea Test and Evaluation Center has a 285-foot concrete pier with a controlling depth of 17 feet (5.2 meters) at mean low tide. An adjacent wharf is approximately 240 feet in length (72 meters) with a controlling depth of 15 feet at mean low tide. Power is available at both locations. Facilities at the pier/marine area include fully equipped machine /fabrication and marine overhaul shops. Also at Site 1, six Range User Buildings are maintained for assembling test equipment and equipment check-out during test mobilization or dockside periods. These staging areas are equipped with a variety of power sources, gantry cranes, compressed air and security features. A fully equipped range user hanger for ground maintenance and storage of helicopters is located at the Atlantic Undersea Test and Evaluation Center helicopter airstrip. Sites 2, 3, and 4 are small, instrumented areas located south of Site 1 used to extend tracking of sonobuoys, communications, and air target track. This project funds costs that are not chargeable to customers.

A. Mission Description and Budget Item Justification

This continuing project supports environmental compliance, conservation and pollution prevention related efforts at the Navy Major Range and Test Facility Base (MRTRB) located at Patuxent River, MD, China Lake, CA, Point Mugu, CA, and Atlantic Undersea Test and Evaluation Center, Bahamas. The Navy Major Range and Test Facility Base environmental projects include ongoing efforts to comply with Federal, State, and local environmental requirements.

The Major Range and Test Facility Base are test and evaluation facilities that provide for Department of War test and evaluation support missions. These missions include: Weapons system testing, military operational squadron training on new weapon systems, and validation of performance or operational characteristics.

A. Mission Description and Budget Item Justification

Project provides continuing maintenance and operational support for the Naval Air Warfare Center (NAWC) Weapons Division Test and Evaluation capabilities. These capabilities include the Pacific Ranges and Facilities, consisting of China Lake Ranges, Ordnance T&E facilities and the Point Mugu Sea Range, aerial and surface target launch and recovery, target test instrumentation and Test and Evaluation aircraft. The Pacific Ranges use China Lake's 1.1 million acres of land and 17,000 square miles of military restricted (R-2508) airspace together with Point Mugu's 125,000 square miles of instrumented sea range and 36,000 square miles of controlled overlying airspace, and airfield and test instrumentation at San Nicolas Island to perform its Test and Evaluation mission. Included in the China Lake ranges is the Electronic Combat Range, which provides outdoor free space developmental and operational testing of airborne electronic warfare systems and tactics against shipboard and land based air defense systems. These ranges perform metric radar, multilateration and optical tracking of test objects; command, control, and destruct for range safety purposes; communications; frequency interference control and analysis; collection processing and display of telemetered data; real-time data processing and display; and the operation of a sub scale aerial target launch capability. Other test capabilities include sled tracks, measurement facilities; propulsion, warhead, environmental, rocket motor, and other missile component test facilities; and gun ranges. This project funds costs that are not chargeable to customers.

A. Mission Description and Budget Item Justification

This project provides funds for the maintenance and operations of the Naval Air Warfare Center (NAWC) Aircraft Division's Major Range and Test Facility Base (MRTFB) capabilities used to conduct test and evaluation of air platforms and associated systems. Naval Air Warfare Center Aircraft Division has extensive airfield, flight test ranges, aircraft systems test facilities and simulation laboratories to support aircraft Research Development Test and Evaluation. This includes 50,000 square miles of airspace, 39,375 square miles of sea space, and 7,950 acres of land space. Product areas include aircraft systems flight test and evaluation, carrier suitability certification, test article preparation, installed system test and evaluation, and modeling and simulation support of the acquisition program test requirements. The Test and Evaluation Group, Patuxent River, performs development and operational test and evaluation of manned and unmanned air vehicle systems, including mission systems, equipment, subsystems, components, and support systems. This project also provides test and evaluation facilities for air-breathing propulsion systems and extensive facilities for conducting both installed and uninstalled aircraft engine development and test and evaluation. This project funds costs that are not chargeable to customers.

A. Mission Description and Budget Item Justification

This project provides maintenance and operations support for the Nanoose and Dabob Bay Ranges along with associated support systems to provide Test and Evaluation and readiness assessment services for acquisition programs and the Fleet. Operates ocean-based environment, measurement and support systems. Maintains and repairs systems that measure warfare system performance. Oversees test, training, and measurement facilities, equipment, operations and maintenance processes. Satisfies customer exercise and measurement requirements through the operation of ocean-based test and measurement systems. Assures the readiness of systems through the implementation of calibration, maintenance, repair and life cycle processes. Performs exercise planning, exercise interpretation and development of surrogate environments, for system performance measurement. Assists in the design, fabrication and testing of systems for Undersea Warfare applications. Oversees the manning and maintenance of Naval Undersea Warfare Center Division Keyport range craft and range craft systems. This project funds costs not chargeable to customers.

A. Mission Description and Budget Item Justification

This project funds the overhauls and preventative maintenance of the 23 Major Range and Test Facility Base (MRTFB) marine vessels located at Naval Air Warfare Center Weapons Division, Point Mugu, CA, Pacific Missile Range Facility, Barking Sands, HI, Naval Undersea Warfare Center Keyport, WA, Naval Air Warfare Center Aircraft Division, Patuxent River, MD, and Atlantic Undersea Test and Evaluation Center. These vessels are used to launch and recover torpedoes, acoustic systems, and other weapons, provide range surveillance and clearance, and can be configured for target services. Overhauls are required to operate ships over 300 tons in compliance with American Bureau of Shipping "Load Line" certification requirements. Major preventative maintenance requiring shipyard support is also performed during these periods to mitigate risks of failures and sustain critical, Hull, Mechanical and Electrical systems to support operations at sea.

A. Mission Description and Budget Item Justification

This program is funded under Research, Development, Test and Evaluation Management Support because it supports efforts directed toward sustaining or modernizing facilities and conducting operations required for general research, development, test, and evaluation.

Headquartered in Norfolk, Virginia, OPTEVFOR serves as the Service Operational Test Agency for the Navy and Marine Corps Aviation. In addition to the headquarters element, OPTEVFOR includes a Fleet scheduling detachment in San Diego, a detachment supporting the Joint Strike Fighter, and the U.S. Operational Test Team at Nellis Air Force Base, Nevada. Operational test and evaluation is conducted under the direction of the OPTEVFOR Director by four Navy and Marine Corps squadrons: Air Test and Evaluation Squadron ONE (VX-1) at Naval Air Station Patuxent River, Air Test and Evaluation Squadron NINE (VX-9) at Naval Air Weapons Station China Lake, Marine Operational Test and Evaluation Squadron ONE (VMX-1) at Marine Corps Air Station Yuma, and Marine Helicopter Squadron ONE (HMX-1) at Marine Corps Base Quantico.

OPTEVFOR utilizes a competency- and warfare-aligned organizational structure to apply rigorous scientific and technical methods within mission-based evaluations of complex systems and capabilities being delivered to the Fleet. OPTEVFOR's Warfare Divisions are responsible for delivering test documents ready for the Director's signature and executing adequate operational test and evaluation (OT&E) for Naval systems and reporting defendable conclusions about capabilities potentially being fielded. They are supported by Competency Divisions, who ensure OPTEVFOR products meet technical requirements, and DoN and OPTEVFOR standards.

There are six warfare divisions: Undersea Warfare (40), Air Warfare (50), Information Warfare (60), Surface Warfare (70), Expeditionary Warfare (80), and Advanced Programs (90). Each warfare division is led by a Navy Captain serving as Division Director with a senior civilian deputy, or a senior civilian director with a Navy Captain/ Commander as the deputy.

Competency divisions include Test Design and Analysis (01B), Test Planning and Evaluation (01C), and Cybersecurity Testing (01D). The Technical Director (00TD) supports all divisions on test and evaluation and technical aspects of test products. Operations and business support divisions include Administrative Services Division (10), Chief Information Office (20), Human Resources, Training and Integrated Risk Management (01A), Contracts (01K), and Comptroller (30).

A. Mission Description and Budget Item Justification

This program element (PE) provides OPTEVFOR general support funding for headquarters annual operating expenses and ensures compliance with Secretary of War and Secretary of the Navy (SECNAV) directives during the conduct of independent operational test and evaluation (OT&E). This funding supports planning, testing, and reporting on the operational effectiveness, suitability, and cyber survivability of new and improved systems and informs recommendations to the Chief of Naval Operations (CNO) regarding Fleet employment.

Funding also supports initiatives, including the manpower required to execute them, that improve OPTEVFOR's ability to develop minimum adequate test strategies that maximize efficiency while minimizing the assets and time required to conduct operational testing. These efforts help reduce overall test and evaluation costs for the Navy. The CNO, as well as acquisition executives and managers at all levels, rely on timely and efficient OT&E to inform decisions on fielding new and upgraded warfighting capabilities to the Fleet.

To support this requirement, funding enables OPTEVFOR to pursue initiatives that improve the efficiency and effectiveness of OT&E. These initiatives include developing organizational level metrics that inform command performance; improving information technology infrastructure to support planning, testing, analysis, and reporting; maximizing the use of operational test data collection opportunities while delivering timely insight to Fleet and acquisition decision makers across the Department of the Navy; and reducing the data collection burden through streamlined development of measures and data requirements during Mission Based Test Design.

Collectively, these initiatives improve the quality of OT&E and help ensure combat systems are adequately tested prior to delivery to Fleet units. Issues identified during OT&E can have long term implications for Fleet readiness and warfighting capability. As adversaries continue to advance technologically and naval systems become increasingly complex, the demand for rigorous and timely technical and operational analysis continues to grow in order to ensure an optimal return on investment of Navy resources.

speed of relevance. These initiatives include IT Network, database and decision-making technology upgrades; implementation of Integrated Testing and Mission Based Test Design across all programs; and improved staffing and expertise in the areas of DON acquisition processes, Modeling and Simulation, Statistical Studies, Information Assurance, and related disciplines. These initiatives are aimed at improving the quality of testing and evaluation, thus ensuring delivery to fleet units of appropriately tested and capable combat capabilities. ***FY 2026 Plans:*** This project will fund civilian salaries and operating costs for OPTEVFOR. - Improve the command's ability to efficiently plan, execute, and report operational test and evaluation (OT&E) through the phased conversion of 58 military billets to 53 civilian billets over a three-year period in order to improve workforce stability, retain technical expertise, and sustain continuity in mission execution. - Continue efforts to enhance and improve test processes and products in support of increasing the value of OT&E. This includes tailoring processes and methods to ensure relevance for adaptive acquisition pathways, agile information technology systems delivering software defined capabilities, and technology insertion projects that continue to mature through alternative procurement and fielding methods. - Continue to support the Naval Capabilities Integration Process (NCIP) effort. Participate in Navy Concepts of Employment (CONEMPS) working groups and coordinate with Warfighting Development Centers (WDCs) to share data and knowledge. Contribute to U.S. Fleet Forces Command and Commander, Pacific Fleet Warfare Capabilities Baseline (USFF/CPF WCB) and Capability Wholeness Assessments to support the Navy's examination of capability across platforms, networks, weapons, and sensors. - Analyze performance across warfare domains and continue collaboration to maximize lessons learned, share resources, and gain efficiencies in testing while providing value to WDCs, Fleet commanders, and acquisition decision makers. - Bridge Fleet to acquisition communication seams through increased engagement with Fleet Commanders, Type Commanders, and WDCs; implementation of Capabilities Based Test and Evaluation (CBTE); and continued refinement of command operations and training.

OPTEVFOR aligns command initiatives with current Navy strategic guidance, including the Chief of Naval Operations' U.S. Navy Fighting Instructions and the Navy's Enduring Warfighting Objectives, ensuring operational testing supports Fleet readiness and the delivery of credible warfighting capability. Efforts focus on strengthening Fleet engagement, improving acquisition decision support, enhancing command operations, and modernizing supporting infrastructure to ensure operational testing remains relevant to evolving warfighting requirements. - Expand test capabilities through enhancements to remote test infrastructure and enclave services. These efforts improve OPTEVFOR's ability to conduct classified and distributed testing across operational effectiveness, suitability, and cyber survivability requirements for naval systems, particularly those requiring special handling or higher than SECRET classification.					
FY 2027 Base Plans: This project will fund civilian salaries and operating costs for OPTEVFOR. - Efforts will continue to refine and enhance testing processes and products to increase the value of Operational Test and Evaluation (OT&E). This includes adapting processes and methodologies to ensure they remain relevant for evolving acquisition pathways and agile information technology systems delivering software-defined capabilities. - Maintain ongoing support for the OPNAV N9 Naval Capabilities Integration Process (NCIP). Participate in Navy Concepts of Employment (CONEMPS) working groups and coordinate with Warfighting Development Centers (WDCs) to share data and knowledge. Contribute to the U.S. Fleet Forces and Commander, Pacific Fleet Warfare Capabilities Baseline (USFF/CPF WCB) to support the Navy's assessment of capability across platforms, networks, weapons, and sensors. - Provide analysis of performance across warfare domains to support the Navy's ability to adapt to evolving operational challenges. Continued collaboration across warfare domains will maximize lessons learned, improve testing efficiencies, and deliver timely operational insights to Fleet commanders, WDCs, and acquisition decision makers. - Employ a command framework that synchronizes OPTEVFOR initiatives with current Navy strategic guidance, including the Chief of Naval Operations' U.S. Navy Fighting Instructions and the Enduring Warfighting

This project funds the civilian salaries and supports associated maintenance and sustainment of cyber hygiene and resiliency of network infrastructure, as well as enterprise IT services for OPTEVFOR operational support networks. Additionally, these funds ensure the hardware and software required to maintain is in compliance with cybersecurity directives that support command operations as required. The Cyber Pure funding under this project directly supports the Assessment & Authorization (A&A) of OPTEVFOR IT systems and the monthly patching and scanning, and reauthorization required for continuous monitoring.

Description: Funding will support maintenance of cyber hygiene and resiliency of network infrastructure and enterprise IT services for OPTEVFOR operational support networks, as well as the hardware and software required to maintain compliance with cybersecurity directives. Funding ensures ability of OPTEVFOR network engineers to comply with cybersecurity requirements for the networks used in support of command operations as required. Facilitates the monthly network patching and scanning required to protect networks from cyber-attacks and intrusions.					
FY 2026 Plans: Maintain compliance with cybersecurity requirements associated with Operational Test and Evaluation Force's information technology and associated networks. Conduct required vulnerability scans and install necessary network patches to ensure cybersecurity of critical network infrastructure.					
FY 2027 Base Plans: Ensure adherence to cybersecurity standards related to the Operational Test and Evaluation Force's information technology and networks. Perform necessary vulnerability assessments and apply required network patches to safeguard critical infrastructure. Initiate the implementation of Navy Enterprise Network protocols to fulfill the Department of the Navy Chief Information Officer's compliance mandates for Zero Trust Architecture and Comply to Connect on the unclassified network.

A. Mission Description and Budget Item Justification

Project 0706, Electromagnetic Compatibility (EMC) and Radio Frequency (RF) Management Program: This project develops tools, processes, EMC Criteria for Navy Systems, and algorithms to identify and mitigate Electromagnetic Interference (EMI) sources for Navy systems and platforms.

Project 3239, The Real-Time Spectrum Operations (RTSO) Program: This project develops software to automate analyses of the electromagnetic (EM) environmental effects (E3) between shipboard transmitters and receivers and the interactions of the EM systems with the other systems installed on units within a strike group. The RTSO program develops and updates numerical models, algorithms, databases, and software aiding and supporting warfighter spectrum planning, sensing and monitoring of the EM environment, EM spectrum characterization and prediction, and managing and maneuvering within the EM spectrum.

A. Mission Description and Budget Item Justification

Electromagnetic Compatibility (EMC) and Radio Frequency (RF) Management Program: This project develops tools, processes, and algorithms to identify and mitigate Electromagnetic Interference (EMI) sources for Navy systems and platforms.

(a) It will support the research, development, testing, and evaluation of electromagnetic compatibility criteria and frequency management to support afloat electromagnetic spectrum operations. The RF EMC criteria will be enhanced to include new RF systems and to comply with fleet operational requirements and streamline Strike Force frequency management processes. It will provide automated Spectrum Management (SM) compatibility criteria for development of operational task communication and radar/weapon plans to support fleet deployments, exercises, and contingency operations. It will provide identification and mitigation of EMI in Navy, North Atlantic Treaty Organization (NATO), Allied, Ashore and Joint Combat Operations. It will provide analysis related to spectrum reallocation proposals to assess impacts on Navy operations and systems, as well as for the Spectrum Supportability Risk Assessments. It will assist numbered fleet commands and DoW commands with determination of EMC criteria and processes to maximize ships' ability to operate in contested and congested environments.

(b) It will support the Shipboard Electromagnetic Compatibility Improvement Program (SEMCIP) to identify, engineer, and evaluate effectiveness of potential EMI corrections. The program also characterizes and quantifies the operational impact of EMI problems on system's mission performance.

(c) It will support the Nuclear Electromagnetic Pulse (EMP) Survivability Program. The program assesses the EMP survivability of all mission critical systems and funds development of a hardness assurance and maintenance program. It will develop improved modeling capability to reduce hardness validation costs at delivery and over the lifetime of the system/platform. The program develops new and updated design criteria, test methodology, test limits, and survivability validation procedures for all Navy systems, ships, submarines and shore facilities.

A. Mission Description and Budget Item Justification

The Real-Time Spectrum Operations (RTSO) program develops tools, processes, and algorithms to conduct spectrum planning, spectrum sensing, and monitoring of the electromagnetic (EM) environment; characterize and predict electromagnetic (EM) environmental effects (E3); and manage and maneuver to avoid or mitigate electromagnetic interference (EMI) and EM vulnerability of Navy platforms.

RTSO supports Navy and Marine Corps EM Spectrum Operations for global spectrum usage and allocation planning. RTSO researches the effects between shipboard transmitters and receivers and EM system interactions with the other systems installed on units within a strike group. The program developed a capability to sense and monitor shipboard EM spectrum usage and provides information to validate spectrum plans in support of Emissions Control (EMCON) within the strike group. RTSO software validates and displays spectrum plan compliance with a spectrum common operational picture. This EM spectrum management aid, combined with an Own Force Monitoring (OFM) sensor input, supports Battlespace Awareness and Information Operations. These self-awareness and validation capabilities greatly enhance the Navy's ability to perform command and control of the EM spectrum warfighting domain.

In FY 2027, the RTSO program will continue to develop and integrate new capabilities for RTSO OFM and spectrum management and design across various Navy and Military Sealift Command (MSC) ship classes. Research and development efforts will focus on enhancing RTSO software, including cloud architecture, spectrum management, and detection capabilities. Additionally, RTSO will explore proof-of-concept capabilities, such as spectrum mission planning decision aids and intelligent sectoring, as well as models to estimate Radio Frequency (RF) performance ranges in complex electromagnetic environments. The program will also participate in Limited Objective Experiments to demonstrate new capabilities to Fleet users and develop software releases for afloat users in a cloud environment. Furthermore, RTSO will validate machine learning and software automation capabilities to inform future integration and development.

A. Mission Description and Budget Item Justification

This program element (PE) provides the analytical foundation for the Marine Corps Studies System (MCSS), including mandated Mission Area Analyses and Cost and Operational Effectiveness Analyses. It also includes capabilities that facilitate force development, war plan assessment, and concept and combat development. The MCSS is the front end of the Marine Corps' acquisition system. This PE also supports the material acquisition process as follows: managing Marine Corps Operational Test and Evaluations; providing Chemical and Biological Consequence Management capabilities for Weapons of Mass Destruction incident response forces; development of the Wargaming capability; and conducting analyses to inform the development and integration of Marine Corps Information Environment Operations (IE Ops).

Change Summary Explanation

The increase from FY 2026 to FY 2027 is primarily attributed to the following:
Proj 3783 Information Environment Strategy, Policy and Governance - Increase reflects the acceleration of the Marine Corps' contribution to CJADC2, in partnership with the Navy's Project Overmatch. This increase will enable the identification and integration of advanced commercial technologies and AI/ML capabilities to address critical warfighting gaps in assured C2 and battlespace awareness, as well as enhance data management technologies, develop serverless cloud infrastructure, and apply AI to automate critical workflows.

A. Mission Description and Budget Item Justification

Marine Corps Requirements Oversight Council (MROC) established Operations Analysis Directorate (OAD), as the sole operations research, analytic support, and studies management program for the Marine Corps Study System (MCSS). MCSS analysis is achieving greater efficiency, productivity, and innovation through operations research methodologies such as: operational analysis, statistical analysis, multi-objective decision methods, optimization, cost analysis, and a wide range of computer-based models and combat simulations ensuring the optimization of resources now and in the future. Analyses span the spectrum of conflict in a Joint, Interagency, Intergovernmental, and Multinational (JIIM) context to inform critical senior level decision makers of current and future national security issues and provides unique and distinct analytic capabilities that enable the collaboration and sharing of analyses that reduces the duplication of topics that are of broad interest. MCSS is an integral part of the Marine Corps and Joint Chiefs decision-making processes to organize, man, train, equip, sustain, and transform resources from the current to the future force.

Description: The Marine Corps Studies System (MCSS) supports the Commandant's Force Design 2030 plan. Executive Order 13589, Department Directive 8260.05 Support for Strategic Analysis, and Department Instruction 8260.2 Implementation of Data Collection, Development, and Management for Strategic Analyses, directed analytic teams apply the following analytic principles: Transparency, Consistency, Integration, use of Standardized and Accepted Methods, thorough consideration of Quantitative and Qualitative Factors, and documentation of Assumptions and Constraints. Program provides research and analysis and findings to ensure a greater understanding of issues and alternatives concerning force design, tactics, wargaming, strategies, intelligence, weapon selection and retention, systems' programs, cyber intel, and resource allocation. Efforts focus on current and future USMC mission requirements and the need for comprehensive analyses that meets the Marine Corps' strategic goals, supports and protects forces in theater, and utilizes funds efficiently.					
FY 2026 Plans: Continued: analytic efforts requested by the CMC, DC, CD&I, HQMC, and FMF senior leadership across the Marine Corps with comprehensive analysis in the areas of: - Space based Capabilities;

A. Mission Description and Budget Item Justification

The Marine Corps Operational Test and Evaluation Activity (MCOTEA) supports the material acquisition process by managing the Marine Corps Operational Test (OT) programs for Acquisition Categories (ACAT) I through ACAT IV (less OT of manned aircraft) and performs other functions that may be directed by the Commandant of the Marine Corps. The primary purpose of Operational Test and Evaluation (OT&E) is to provide information to the Milestone Decision Authority (MDA) regarding the Operational Effectiveness (OE) and Operational Suitability (OS) of the system addressed at a decision point. MCOTEA must ensure that the Marines in the Operating Forces receive the very best possible equipment and support. MCOTEA must also ensure each system proposed for acquisition is tested adequately, evaluated objectively, and reported independently.

Marine Corps Operational Test and Evaluation Activity (MCOTEA) is the only unit that provides the Marine Corps with required operational test and evaluation (OT&E) capability, ensuring the Marine Corps is compliant with laws and regulations, and ensuring that training and equipment are operationally effective, relevant, and suitable. Additionally, MCOTEA's early involvement, coordination, and oversight in developmental testing and evaluation of new combat and combat support systems ensures that our Marines are the best trained, and have the best equipment, with the lowest test costs for taxpayers. Finally, MCOTEA's support of rapid acquisitions ensures that Marines in the fight are supported with the newest and most advanced equipment and that the Marine Corps is compliant with regulations.

A. Mission Description and Budget Item Justification

The Commandant of the Marine Corps' (CMC) Office of Net Assessment (ONA) was established in July 2022 as a result of a CMC tasking in the April 2021 Annual Force Design Update. ONA provides long-term comparative assessments of trends, key competitions, risks, opportunities, and future prospects of USMC roles and missions in order to support strategic decision making for the CMC and Assistant Commandant of the Marine Corps (ACMC).

A. Mission Description and Budget Item Justification

The enhanced Wargaming Capability (WGC) facilitates Force Design by utilizing advanced modeling and simulation systems and analytic assessments of current Operation Plans, Concepts of Operations, future operational and functional concepts, and operational and technology-based approaches. These results will refine our Force Design through our campaign of learning and increase research capacity to maintain the USMC as a "force-in-readiness." The USMC WGC consists of Wargaming software, modeling, and simulation tools and systems, a Wargaming and Analysis Center (MILCON Project P-719), and the necessary personnel supporting the new capability.

The WGC solution will provide an enhanced wargaming capability to inform decision support to capability development prioritization and resourcing.

The program gained entry into the facility in the 1st quarter of FY 2024 and began the Information Technology (IT) and Audio-Visual (AV) infrastructure installation to support the accreditation process for certifying the complex technologies.

The WGC program acquisition strategy transitioned from 10 U.S.C 2302 Middle Tier of Acquisition (MTA) to a Major Capability Acquisition (MCA) in October 2025. This shift in strategy came as the USMC suspended deployment of the existing wargaming software solution due to affordability. This appropriation will now support the delivery of an interim wargaming solution to meet the USMC's minimum requirements with planned incremental enhancements.

FY 2026: $6.190M											

D. Acquisition Strategy

The WGC program acquisition strategy transitioned from 10 U.S.C 2302 Middle Tier of Acquisition (MTA) to a Major Capability Acquisition (MCA) in October 2025. This shift in strategy came as the USMC suspended deployment of the existing wargaming software solution due to affordability in July 2025. The adjusted acquisition strategy will now deliver an interim and affordable wargaming and analysis solution that will meet the USMC's minimum number of requirements. FY25-FY27 will focus on fielding the interim solution and incrementally growing the capabilities of this solution to operate on the networks and in the Government cloud environments to support remote global wargame participation. FY28-FY31 will focus on improving the fielded solution as a long-term permanent capability with increased classified networks, functionality, and security posture.

A. Mission Description and Budget Item Justification

INFORMATION WAR ROOM DIVISION (IWR): The Information Environment (IE) is a global, interconnected, complex, continuously changing eco-system that is increasingly connected across our war fighting functions. Given the complexity and the speed of changes in the IE and to address the significant role information now plays in current and future conflicts, a unifying operational and technical strategy must be developed to outpace our adversaries.

Analysis will inform the development and integration of Marine Corps Information Environment Enterprise (MCIEE) that are guided by the Commandant's Planning Guidance (CPG) and Marine Corps Force Design. Research and analysis efforts support: design and coordinated implementation of an Objective Network to fight on and through a contested environment; design structure to engage and collaborate with Joint and Coalition partners; and conduct analysis to inform the development and fielding of an integrated information capability. These efforts will be accomplished leveraging analytic support from government Labs and Industry to dynamically exploit our National Defense Strategy (NDS) priority operational problems related to the Information Environment through demonstration, limited user evaluations, and functional capability assessments with the Fleet Marine Forces.

SERVICE DATA OFFICE (SDO): The Service Data Office (SDO) is the designated authority for executing the Marine Corps' transformation into a data-centric, AI-enabled force, a critical modernization effort mandated by senior defense leadership to maintain our competitive edge. This transformation is not merely a technological upgrade; it is a strategic imperative driven by the Secretary of War's directive to "treat data as a weapon system and manage, secure, and use data for operational effect" (DOW Data Strategy, 2020; DepSecWar Memo, "Creating Data Advantage," 2021). The SDO's mission directly implements the DOW's core data decrees, ensuring that all Marine Corps data is visible, accessible, understandable, linked, trustworthy, interoperable, and secure (VAULTIS), which is foundational to enabling Combined Joint All Domain Operations and decision advantage from the tactical edge to the enterprise level.

B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total
- Continued to focus on the Information Warfare capabilities within the Deputy Commandant for Information portfolio. This includes Information Operations, Electronic Warfare, Tactical Command and Control, and Cyber Operations. - Continued rapid development of capabilities to address problems supporting Information Operations. The Marine Corps Information Environment Enterprise (MCIEE) Information Modernization team will develop and transition software and hardware solutions to Programs of Record. - This funding also supports MCIEE efforts that align to Joint priorities for the Marine Corps, and the CMC's Force Design 2030. - Trained and conducted Field User Evaluation (FUEs) for the MAGTF C2 Prototype (MCP) capability kits for Project DYNAMIS, the USMC contribution to Navy Overmatch and Combined Joint All Domain Command and Control (CJADC2)					
FY 2027 Base Plans: Information War Room (IWR) Division - Initiate development and integration of software and hardware prototypes to fuse Information Operations (IO), Electronic Warfare (EW), Command and Control (C2), and Cyber capabilities into a unified warfighter-focused toolset. -Conduct technical feasibility studies and systems engineering efforts to define the architecture for a converged information warfare system. - Procure and deliver Project DYNAMIS Mission Command Package (MCP) kits to Marine Corps Tactical Systems Support Activity (MCTSSA) and designated operational units for technical assessment and Field User Evaluations (FUEs). -Analyze FUE results to inform design modifications and finalize the technical data package for follow-on development. - Complete the final development and integration of the Maven Smart System (MSS) AI/ML capability for deployment to operational test units. - Conduct developmental testing on the MSS to validate performance against technical specifications. - Deliver MSS prototypes to designated operational units for FUEs to assess military utility in processing intelligence data and identifying threats. - Develop and integrate a prototype Joint Fires Network (JFN) Tactical Edge Node designed for employment by distributed stand-in forces. - Conduct rigorous FUEs in a simulated INDOPACOM environment to validate the prototype's ability to connect to the joint fires network and pass targeting data.

A. Mission Description and Budget Item Justification

This project provides management headquarters contractor support to the Integrated Warfare Systems (IWS) Program Executive Office (PEO). This work supports Navy Acoustic Superiority and Technology Insertion Initiatives through the application of advanced development and testing of sensors and sensor processing systems supporting tactical control systems improvements. This addresses technology challenges to improve tactical control in littoral and open ocean environments for a variety of operational missions.

A. Mission Description and Budget Item Justification

This project funds all basic costs of Office of Naval Research Management Headquarters Activity (MHA) non-labor in support of the entire Navy Science & Technology (S&T) program. Through this support, the S&T enterprise pursues the technological advances that enable the Fleet's ability to operate from a position of technological superiority.

Specifically, funding facilitates the execution of the Navy's basic research, applied research, and advanced technology development programs at the nation's universities/colleges, Navy laboratories, Warfare Centers, and private industry.

A. Mission Description and Budget Item Justification

This project funds all basic costs of Office of Naval Research Management Headquarters Activity (MHA) salaries in support of the entire Navy Science & Technology (S&T) program. Through this support, the S&T enterprise pursues the technological advances that enable the Fleet's ability to operate from a position of technological superiority.

Specifically, funding facilitates the execution of the Navy's basic research, applied research, and advanced technology development programs at the nation's universities/colleges, Navy laboratories, Warfare Centers, and private industry.

A. Mission Description and Budget Item Justification

Marine Aviation Developmental Management and Support enables the development of Marine Aviation's future capability concepts through analytically rigorous study, modeling, simulation, and validation. This PE includes funding for the integration of Marine Aviation into the USMC's Navy Capabilities-Based Assessments Integration Process - Marine Corps (NCIP-MC) processes, integration of USMC Artificial Intelligence (AI) analysis and prototyping efforts, as well as support to ongoing joint warfighting effectiveness efforts lead by OSW Cost Assessment and Program Evaluation (CAPE) and Research & Engineering (R&E). Fully informed wargaming and operational analysis conducted via this PE will ensure Marine Aviation development programs are driven by threat data and analysis resulting in impactful, comprehensive investment decisions. This PE will inform development and prototype efforts, which progress high-risk technology areas in support of Marine Aviation capabilities.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

Capability Development Support will provide Marine Aviation with the capability to conduct fully informed mission and operational analysis, driven by threat data and guided by Force Design. As USMC tactics evolve in support of the Stand-in Force (SiF), this PU informs investment decisions for future Marine Aviation capabilities and drives innovation through the validation of Science and Technology (S&T) transitions into both legacy and future Fleet assets.

FY 2026 Plans:

Continue developmental and Operational test and evaluation planning and development, mission effectiveness and operational analysis, and trade studies. Operational effectiveness and high-fidelity threat analysis will be supported by the Virtual Warfare Center (VWC), Government and Contractor entities. Analytical rigor will be provided by integrating into the USN's NCIP and the USMC's NCIP-MC processes, as well as continued cross-service collaboration efforts with the Navy, Army, and Air Force. Validation of Marine Aviation requirements and investment decisions will be conducted utilizing new and legacy Modeling, Simulation and Analysis (MS&A) infrastructure to include facilities, laboratories, and integrated development environment associated software and hardware. Efforts will include working with transition partners across the Services to ensure effective investment strategies resulting in capability delivered to the Warfighter via Joint MS&A.

FY 2027 Base Plans:

Conduct mission effectiveness, operational analysis, and trade studies supporting requirements refinement for USMC Aviation platforms aligning to future capability concepts. Activities include conceptual design and effectiveness analysis of Future Attack Strike (FASt) aircraft development. Operational effectiveness and high-fidelity threat analysis will be supported by the Virtual Warfare Center (VWC), Government and Contractor entities. Analytical rigor will be provided by integrating into the USN's NCIP and the USMC's NCIP-MC processes, as well as continued cross-service collaboration efforts with the Navy, Army, and Air Force. Validation of Marine Aviation requirements and investment decisions will be conducted utilizing new and legacy

Project 3754 is a FY 2027 new start.

A. Mission Description and Budget Item Justification

Marine Aviation Accelerated Decision Making System enables a Marine Aviation wide, large-scale implementation of autonomy, artificial intelligence and agentic workflows to enable Marine Aviation to excel in both future asymmetric and peer/near-pear operations. These operations will require the use of decentralized decision-making across distributed aviation forces through Marine Corps concepts of operations such as Distributed Aviation Operations (DAO) and Decision-Centric Aviation Operations (DCAO) with the goal of enabling faster decision making and preservation of tactical operators for strategic tasking.

A. Mission Description and Budget Item Justification

Allied/Coalition Maritime Environment (ACME) 0798:
The Department removed funding and zeroed out the program starting in FY2026.

Space & Electronic Warfare (SEW) Engineering 2144:
This project is a systems engineering non-acquisition program to develop, test, implement Technical Authority (TA) products, and validate Naval Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR), Business Information Technology (IT), and Space System architectures to support naval, joint and coalition missions across normal, contested, and degraded cyber/operational environments. The objective of this project is performed through multiple tasks that ensure development and delivery of Naval Information Warfare (IW) capabilities that are well integrated, interoperable, secure, and resilient to meet validated warfighting requirements.

NAVWAR leads SECNAV guidance under Cybersecurity Technical Authority (CSTA) to define and employ a uniform objective recursive approach employing Cyber Ready strategy shifting away from a compliance only methodology. Efforts will automate program engineering reviews and speed IW capability certification and authorization to overmatch our adversaries in a Cyber contested environment.

Fleet Experimentation 3319:
The U.S. Navy's Fleet Experimentation (FLEX) project advances operational and tactical warfighter capabilities through the experimentation of high payoff initiatives, technologies and concepts, Fleet Concepts of Operations (CONOPS), doctrine, and new tactics, techniques and procedures (TTP). The primary focus of FLEX between 2026 and 2031 is to address priority warfighting gaps identified by the four-star Fleet Commanders through the execution of experimentation events focused on materiel/ non-materiel capabilities.

Change Summary Explanation

The FY2027 request was decreased by $2.495M.

Project 2144 (SEW) - FY2027 decrease of $2.669M to fund higher Departmental priorities.

Project 3319 - FY2027 increase of $0.740M will support Fleet Experimentation efforts related to maritime capability development, investment, and delivery.

A. Mission Description and Budget Item Justification

The ACME program advances Information Warfare (IW) to include Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR); Electronic Warfare (EW); and Cyber Warfare, interoperability with Australia, Canada, New Zealand, United Kingdom, United States (AUSCANNZUKUS), North Atlantic Treaty Organization (NATO), and other Allied and Coalition partners. The program determines maritime operational gaps with our allies, identifies Doctrine, Organization, Training, Material, Leadership, Personnel, and Facilities (DOTMLPF) solutions with the potential to fill those gaps, and assesses these solutions and associated concepts of operation in laboratory and at-sea environments. The ACME program includes integration and testing in support of Allied and Coalition warfighting capabilities, including interoperability testing of IW equipment. Allied and Coalition interoperability is critical for future maritime operations, especially as the United States Navy cooperatively works towards a federated environment leveraging initiatives such as Federated Mission Networking (FMN), Secret and Below Releasable Environment (SABRE), and Combatant Command solutions such as Indo-Pacific Command Mission Network and Cooperative Partner Environment.

Currently, connectivity with AUSCANNZUKUS and other Allied/Coalition forces is focused on traditional paths, requiring extensive backhaul through ashore infrastructure. Higher bandwidth solutions suitable for use over tactical networks require development and assessment for emerging coalition and joint interoperability requirements, such as Network Operations Without Shore (NOWS), Denied, Degraded, Intermittent and Low-bandwidth (DDIL) operations, and to counter Anti-Access Area Denial (A2/AD) threats. Increases in data throughput are required for the effective exchange of rich IW data sets and services via Service Oriented Architectures (SOA) within the limitations of High Frequency (HF), Ultra-High Frequency (UHF), and other portions of the radio frequency spectrum, coupled with appropriate Information Assurance and Computer Network Defense (IA/CND) mechanisms. Development and assessment of potential solutions will integrate improved IP capabilities with the Advanced Digital Network Systems (ADNS) and existing international standards (e.g. Allied Communications Publication 200, NATO Standardization Agreements 5066 and 4691). The continued development and refinement of advanced tactical networking technologies and protocols, to include Low Probability of Intercept (LPI), Low Probability of Detection (LPD), and Anti-Jam (AJ) capabilities as well as Automatic Link Establishment (ALE) standards, will provide for a significant improvement in secure data sharing within, and between, coalition maritime elements.

Coalition Warrior Interoperability eXperiment (CWIX) has been integrated within the ACME program. CWIX efforts are focused on assessing federated Coalition capabilities within the NATO command construct via connected Live, Virtual, Constructive (LVC) capabilities resident in the Combined Federated Battle Laboratories Network (CFBLNet). CWIX also resources engineering activities in cooperation with PEO C4I to integrate USN Expeditionary Mission Partner Environment with US Air Force (USAF) Mission Partner Capabilities Office (MPCO) Enterprise Mission Partner Environment efforts. Additionally, CWIX resourcing enables assessment of NATO Federated Mission Networking Spiral Specifications as they relate to USN Programs of Record via the Coalition Interoperability Assurance and Validation (CIAV) construct in conjunction with Joint Staff J6.

A. Mission Description and Budget Item Justification

To support Navy objectives in advancing Information Warfare (IW) capabilities, the Space and Electronic Warfare (SEW) Engineering project primary functions are:

Develop the architectures, specifications and standards, tools, and processes to support a single integrated Navy Cybersecurity plan. Develop cybersecurity engineering criteria within Navy specific guidance to drive common and consistent implementation of security controls within a threat informed mission impact approach across current and future Navy Programs of Record/projects. This eliminates redundancies and inefficiencies characteristic of previous stove-pipe development efforts in which each system addressed security individually. These efforts enable a standardized approach to improve the Navy's cyber resiliency to Cyber Adversary's weaponization of IT/OT susceptibility to attack. Provide the cybersecurity vulnerability and functional test standards, which supports cybersecurity test requirements and the Command, Control, Communications, Computers, Intelligence (C4I) components of Naval Information Warfare Systems Command (NAVWARSYSCOM) Information Warfare (IW) Kill Chain Testing for SYSCOM Red Team.

NAVWAR develops and deploys innovative Naval approach for rapid delivery of software applications with emphasis on security & automation via Certified Continuous Integration (CI) / Continuous Delivery (CD) pipeline tools based upon NAVWAR designed SECDEVOPS services under SECNAV Rapid Assess & Incorporate Software Engineering (RAISE). This combination of Systems Commands functions, services and tools ensures Navy platforms in operational maritime environments can effectively defend and "fight through" cyber adversary attacks under a framework of mission thread analysis and assessment.

NAVWAR establishes an integrated Enterprise Architecture to support design, development and delivery of integrated Navy Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR), Business Information Technology (IT), and Space System capabilities. This architecture reflects current (as-is) and future (target) end states to support technical analyses, program planning, and enterprise-level investment decisions across IW capabilities on both ashore and afloat platforms. Provides engineering tools and processes to drive rigorous systems engineering discipline across the acquisition lifecycle to support rapid development and delivery of secure and interoperable C4ISR, Business IT, and Space Systems capabilities that meet Fleet requirements. Conduct Systems Engineering Technical Reviews (SETRs) to provide independent, objective assessments and certifications of technical maturity and compliance with applicable architectures, specifications and standards across IW capabilities.

FY 2026 Plans: - Continuing key efforts to develop technical architectures, tools, standards, and best practices to advance the Navy's integrated plan for effective implementation of resilient cybersecurity. These critical Cyber Security Technical Authority (CS TA) artifacts: (1) leverage CS TA Cyber Risk Assessments (CRA) to account for emerging cyber threats and advances in technology, (2) drive the use of Risk Management Framework (RMF) Rapid Assess and Incorporate (A&I) Software Engineering (RAISE) process for inheritance to reduce redundant cybersecurity investments, lower operational risk and significantly improve delivery times for emerging capabilities. - Continuing to perform holistic Cyber Risk Assessments (CRA) that evaluate Navy systems in the context of warfighting missions across tabletop, lab, and operational environments. The results of the CS TA Tabletop Mission Cyber Risk Assessments (TMCRA), which examine access vectors and likelihood of adversary exploit, are tested in NAVWAR's IW Capability Testing environment, and are then used to support Navy-wide Live, Virtual, and Constructive (LVC) Information Warfare (IW) capability tests and Fleet experimentation. This holistic set of assessments allows Program Managers to include to mitigate existing risks across the system lifecycle as well as strengthen the cybersecurity design of future system variants. - Continuing to develop automation of the RMF process, leveraging integrated digital engineering models that will streamline data and analytics to provide assessment results. The automated process includes integrating various RMF roles, data entry, and continued auditing/validating RMF steps (control selection, assessment, and authorization). Implement cyber operational risk threat assessments and continuous monitoring. Perform DON CISO Cyber Figure of Merit (CFOM) acquisition gate assessments, system of systems Cyber Risk to Mission (CRTM) assessments, develop and update cybersecurity technical standards, all of which support better

A. Mission Description and Budget Item Justification

The Fleet Experimentation (FLEX) program examines materiel and non-materiel initiatives in development to address the fleet's most critical warfighting priorities and gaps. Commander, U.S. Naval Forces Europe/Africa, Commander, U.S. Pacific Fleet, and Commander, U.S. Fleet Forces Command (CUSFFC) are the FLEX Program Owners. Per the current FLEX Instruction (3900.1E), they provide program oversight, Commanders' FLEX guidance with experimentation priorities, funding oversight, and advocacy for the most viable recommended solutions to fleet priority capability gaps. CUSFFC manages FLEX program funding. Director, Navy Warfare Development Center (NWDC) serves as the Executive Agent (EA) and is responsible for FLEX campaign design and management, experiment planning and execution, analysis, final reporting, and post-experiment actions. FLEX results drive action across three structured return on investment (ROI) categories: capability development, investment, and delivery.

Title: Fleet Experimentation (FLEX)	11.863	12.585	13.113	0.000	13.113
Articles:	-	-	-	-	-
Description: With Program Oversight from United States Fleet Forces Command (USFFC), Navy Warfighting Development Center (NWDC) has facilitated the completion of 176 DOTMLPF-P actions, since transitioning to a multiyear campaign model in FY22, resulting in the enhancement of 72 warfighting systems and 82 doctrine publications. These actions directly support the Fleet Commanders' highest warfighting priorities and gaps, the Chief of Naval Operations' Navigation Plan, and the National Defense Strategy. Details are readily available at higher classifications.					
FY 2026 Plans: The FY26 iteration ($12.6M) of the FLEX Campaign includes 16 initiatives (initiative details are classified). Topics include unmanned systems, artificial intelligence, resilient communications, long-range fires, C-C5ISRT, contested logistics, and maritime homeland defense. Based on discussions with OPNAV N94, FLEX will emphasize examination and development of warfare center technologies, thus enabling continued refinement via the USFF Fleet Battle Problem series and the PACFLT Integrated Battle Problem series. Descriptions of FY26 FLEX initiatives are readily available at higher classification. In FY26 to date, NWDC has provided 7 FLEX

A. Mission Description and Budget Item Justification

U.S. Navy's Trident Warrior (TW) experiment campaign enables early delivery of Information Warfare (IW) capabilities to the warfighter via Fleet-directed TW operational events. It integrates stand-alone systems and efforts to achieve enhanced capabilities and demonstrates these capabilities in operational environments. This places innovative technologies into the hands of the warfighter to evaluate their effectiveness. Additionally, it develops supporting doctrine and Concepts of Operation to improve warfighting effectiveness. Coordinates IW efforts with other Service/Joint/Department of War/National efforts to ensure Joint/Interagency/ Allied/Coalition applicability and interoperability.

A. Mission Description and Budget Item Justification

NAVY CYBERSECURITY

Cyber Warfare consists of many different aspects to include sabotage of our weapon systems, networks as well as enablement of missions. Nation and non-nation state actors are acquiring and employing more advanced cyber-attacks in order to exploit our networks and aviation systems challenging our technological edge. The threats and capabilities are real and range from exploiting capabilities, overloading weapons systems and logistics supply chains, to jamming signals or taking control of weapons systems. Adversarial cyber-attacks must be defended against while contributing to the exploitation of cyber warfare capabilities.

To meet these challenges and address the Chief of Naval Operations priorities and tasking, these efforts are specifically focused on Naval Air Systems Command weapon or control systems and programs to ensure warfighting effectiveness as part of integrated / multi-platform kill chains. These efforts will strengthen our cyber posture by developing capabilities and solutions to deter, detect, and mitigate cyber threats and safeguard classified naval aviation systems and platforms from "cradle to grave." These solutions will be integrated into the acquisition of weapons systems to enhance security, increase lethality, and improve resiliency in the expected operational environments. Our weapon or control systems are unique in the aforementioned environments and mission, but also in the presence of numerous non-traditional access points and trusted cyber relationships required for operational environments.

Further, this line sustains Naval Aviation's Red Team capability to research, identify and validate nation-state exploitable cyber susceptibilities and vulnerabilities in both deployed and next-generation warfighting platforms. Through it, these efforts improve Naval Aviation's mission survivability by developing and demonstrating operational TTPs within the cyber contested environment. The team partners with Naval Aviation programs to certify theorized cyber weaknesses and thus to prevent denial, degradation or disruption of safety, readiness, and mission. The Red Team's assessment products support CYBERSAFE assessments of platforms and systems and likewise supports PMAs and OPNAV with validated threat data prioritizing systems security engineering (SSE) investments. The team leverages national-level cyber warfare experts, all-source intelligence, and technology research to assess Naval Aviation Enterprise system and system-of-system.

JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under RESEARCH, DEVELOPMENT, TEST and EVALUATION MANAGEMENT SUPPORT because it supports efforts directed toward sustaining or modernizing installations or operations required for general research, development, test and evaluation.

A. Mission Description and Budget Item Justification

NAVY CYBERSECURITY

Funding furthers the research and development of Cyber Warfare capabilities that cross all Naval Aviation systems within the Naval Aviation Enterprise improving cyber survivability and resiliency within naval aviation systems. Adheres to the tenants of the DON CIO's cyber ready call to action.

Establishes IOC and further develops the NAVAIRSYSCOM Cyber Planning and Response Center (CPRC) as required by OPNAVINST 5239.1E U.S. Navy Cyber Security Program and OPORD NEPTUNE SHIELD issued by Fleet Cyber Command, the ECH II for the NAVY's CSSP. Efforts align with CJCSM 6510.01B Cyber Incident Handling Program and SECNAVINST 5239.19A DON Computer Network Incident Response and Reporting Requirement. The CPRC provides ability to conduct incident response, reporting and C2 of cyber events impacting NAE platforms and weapons systems both ashore and afloat as well as the analysis and assessment critical in determining cause for event, likelihood of additional similar events and the development of solutions to prevent future incidents.

Funding provides the further development of critical assessment capabilities within our world class Naval Aviation Cyber Red Team allowing for capability to research, identify and validate nation-state exploitable cyber susceptibilities and vulnerabilities in both deployed and next-generation warfighting platforms.

Additionally, funding allows for further research and development of cross platform solutions utilizing leading edge technologies such as Artificial Intelligence and machine learning that enable cyber situational awareness, cyber supply chain risk analysis, automate and convert data collection for metrics, Cyber Test and Evaluation methods, cyber protection conditions, Cyber Safe certification process, Cyber Workforce analysis, cyber ready metrics, model based systems engineering capabilities, and supports Cooperative Research and Development Agreements between government and aviation manufacturing companies to improve information sharing supporting the above efforts.

These cyber warfare research and development efforts will strengthen our cyber posture by developing solutions to deter, detect, and mitigate cyber threats and safeguard classified naval aviation systems and platforms from "cradle to grave."

A. Mission Description and Budget Item Justification

Executive Order 13587 and the National Insider Threat Policy mandate all United States Government departments and agencies to implement insider threat programs that monitor user activity on all classified networks and provide an insider threat analytical and response capability. The Counter Insider Threat Capability (CITC) is the Department of the Navy's implementation of this requirement. CITC's mission is to prevent, deter, detect, and respond to the threat from witting and unwitting insiders. The Platform for Risk Evaluation and Engagement to Neutralize Threat (PREVENT) is the materiel solution required to support the CITC mission and consists of two parts: (1) User Activity Monitoring (UAM), which monitors user activity on classified Navy networks, and (2) an Integrated Tool Suite (ITS), which provides the Information Technology platform for the analytic and response capabilities. The PREVENT system provides the technology required by the Navy Insider Threat Analytic Hub to comply with the National mandates and to protect Navy data, equipment, and personnel from insider threats. RDT&E,N funding is required to develop future, long-term, capability; integrate; and perform testing and evaluation of this capability.

A. Mission Description and Budget Item Justification

Executive Order 13587 and the National Insider Threat Policy mandate all United States Government departments and agencies to implement insider threat programs that monitor user activity on all classified networks and provide an insider threat analytical and response capability. The Counter Insider Threat Capability (CITC) is the Department of the Navy's implementation of this requirement. CITC's mission is to prevent, deter, detect, and respond to the threat from witting and unwitting insiders. The Platform for Risk Evaluation and Engagement to Neutralize Threat (PREVENT) is the materiel solution required to support the CITC mission and consists of two parts: (1) User Activity Monitoring (UAM), which monitors user activity on classified Navy networks, and (2) an Integrated Tool Suite (ITS), which provides the Information Technology platform for the analytic and response capabilities. The PREVENT system provides the technology required by the Navy Insider Threat Analytic Hub to comply with the National mandates and to protect Navy data, equipment, and personnel from insider threats. RDT&E,N funding is required to develop future, long-term, capability; integrate; and perform testing and evaluation of this capability.

D. Acquisition Strategy

The Counter Insider Threat Capability (CITC) program transitioned from a Middle Tier of Acquisition (MTA) pathway program to a Navy Abbreviated Acquisition Program (AAP) on 17 Jul 2023 following a successful PEO Command, Control, Communications, Computers, and Intelligence (PEO C4I) decision disposition review on 21 Jun 2023. An AAP provides CITC with the greatest flexibility to sustain current capability while delivering incremental enhancements based on existing and/or new requirements. Decision Authority was shifted to Program Manager, Cybersecurity Program Office (PMW 130) as part of the AAP transition. PMW 130 will continue to deliver and sustain CITC capabilities as an AAP.

As an AAP, CITC employs a flexible acquisition strategy based on the Joint Capabilities Integration and Development System (JCIDS) Information Technology (IT) to incrementally deliver capability that can respond to rapidly evolving requirements, priorities, and technology. Requirements for each capability increment are derived from the Platform for Risk Evaluation and Engagement to Neutralize Threat (PREVENT) Information Systems Capability Development Document (IS-CDD) via Capability Drops (CDs) and approved by the CITC Requirements Governance Board (RGB). Prior to the AAP transition, Capability Drop-1 (CD-1) defined the criteria required to achieve Initial Operational Capability (IOC) through rapidly fielding existing Commercial-Off-The-Shelf (COTS) tools under MTA. CD-1 was successfully fielded

Exhibit R-2A, RDT&E Project Justification: PB 2027 Navy		Date: April 2026

and achieved Initial Operational Capability (IOC) in Feb 2022. Capability Drop-2 (CD-2), approved by the CITC RGB in Sep 2022, expanded upon CD-1 by delivering enhanced case management capabilities and additional Integrated Tool Suite (ITS) data sources. Capability Drop-3 (CD-3), approved by the CITC RGB in Jul 2023, expanded upon previous CD's by delivering automated and manual network Lightweight Directory Access Protocol (LDAP) data ingestion for entity resolution, approval for data source ingests defined by stakeholders, and approval to import/export User Activity Monitoring (UAM) data to external agencies with stakeholder approval. As an AAP, CITC will continue to deliver via CDs based on PREVENT IS-CDD.

A. Mission Description and Budget Item Justification

This program element (PE) allocates funding and operational support for the Management Headquarters Activity (MHA) functions that assist the Operational Test and Evaluation Force (OPTEVFOR) in adhering to directives from the Secretary of War and the Secretary of the Navy (SECNAV). These directives mandate the execution of independent operational test and evaluation, as outlined in PE 0605865N, which focuses on enhancing operational test and evaluation capabilities.
